

STYLE CHART B 2.22 - 3.22

Beech is one of Europe's most common hardwood species and the excellent strength properties in combination with a uniform structure make beech very suitable for floors. Coloured throughout by using a unique colouring technique and in combination with a slightly white toned surface an appearance very similar to oak is achieved.

Junckers solid hardwood flooring is produced and categorized in accordance with EN 13629, EN 14342 and Junckers own factory standard.

The floors are made exclusively from solid hardwood and the photographs illustrate the colour, knots and structural graining variation characteristic for the specific wood species and grade. Each photograph shows the average appearance of the grade. It is normal to see a variation in appearance between individual boards, staves and floors produced and installed at differing times.

Up to 5% of the staves may contain features of the next style. Hardwood floors may fade and change colour over time, especially when exposed directly to sunlight.

14 & 22 MM SYLVAKET NORDIC STRIP BOARD SOLID HARDWOOD FLOORING

TECHNICAL INFORMATION

THICKNESS x WIDTH - 14/22MM x 129MM

SYLVAKET NORDIC CLASSIC

This grade has a uniform look with some colour and structural graining variation between the staves. Only few small sound black knots and very fine hairline splits occur.

SYLVAKET NORDIC HARMONY

This grade has a natural look with more colour and more structural graining variation between the staves. Sound medium sized black knots and hairline splits occur to some degree individually and in groups. Red heartwood, inbark and minor voids in the surface of the wood appear. Knots and other irregularities are factory filled with one colour filler.
