## Always one step ahead

Our vision of high quality roof windows

1

### Easy and quick to fit

- Up to 30 % quicker to install\*
- Clip type assembly used for the exterior profiles (no screws)
- Bracket and optional thermal insulation system pre-fitted

2

### More energy savings

- High insulation and reduction of thermal bridges
- Treatment of air permeability
- More natural light and heat

3

### More natural lighting

- Up to 10 % more light area\*\*
- Slimmer exterior profiles and no control bar at the top of the window
- More natural light

4

### Maximum convenience

- Outwards opening<sup>3</sup> so not to encroach on the living space
- One handle at the bottom of the sash for all functions (opening, ventilation, cleaning)

\* Compared to a standard roof window with optional energy efficiency packages

\*\* For ETR7 and ETR4 compared to standard roof windows with equivalent dimensions

## Energy Efficiency

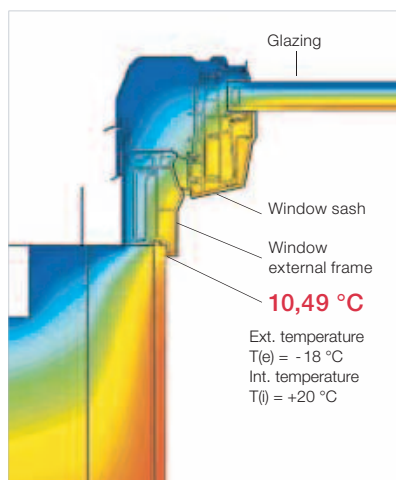

In order to combat climate change by substantially and rapidly reducing greenhouse gas emissions, low-energy constructions have become a priority. Making the most of its considerable German know-how in the field of ecobuilding, Easy-Trim Roto has invested heavily in the technical aspects of the Easy-Trim Roto roof window range, to ensure that it provides an innovative solution to the new thermal requirements of passive or low energy consumption buildings.

1

### High Thermal Insulation

**Isothermal diagram ETR8**  
with pre-fitted insulation collar

**Isothermal diagram ETR8**  
without pre-fitted insulation collar

■ **Reduction of thermal bridges:**  
pre-fitted thermal insulation collar\*  
(see cross-section below nb. 1)

■ **High thermal insulation:**  
double or triple\*\* low energy  
Easy-Trim Roto glazing

**U-value of 0,80 W/m²K**  
**for ETR8 (PVC)**  
**with the triple glazing**  
**Roto blueTec Plus (9P)**  
**according to the**  
**'Passiv house' standard**

\* Optional on ETR7 and ETRi4 and as standard on ETR8

\*\* Triple glazing only for ETR8

## 2

### Air Permeability

- **High Air Permeability:**  
Vapour barrier included as standard in accordance with DIN EN 12207 (classification A3)

- **'Blower Door' test (DIN EN 13829):**  
Double rubber seal to ensure airtightness compliance

**ETR7 PVC**, with low-energy glazing, optional pre-fitted insulation collar and vapour barrier as standard

## 3

### More Natural Light

**Slimmer external profiles**  
for a greater light area

**Combination side-by-side or stacked**  
for even more light

- **Greater light area\*:**  
Slimmer external profiles for a greater light area compared to other windows on the market
- **More light:**  
Window height up to 1600 mm for optimal space utilisation and light yield (ETR4, ETR7, ETR8)

\* For ETR4 and ETR7

## 4

### Natural Heat

**ETR7 PVC**, double insulation glazing and Screen exterior blind

- **Greater Energy Savings:**  
Double or triple\*\* glazing with low emissivity and exterior sun screening to get maximum natural light whilst maintaining energy saving in winter and summer

\*\* Triple glazing for ETR8 only

## Manual Opening Roof Windows

### **ETR7**

#### **Manual Opening top-third roof window**

- Top-third opening
- Single handle operation at the bottom
- Double low emissivity glazing prevents heat escaping through windows
- Optional thermal insulation system pre-fitted
- No obstructive sash

### **ETR8**

#### **Manual Opening top-hung roof window**

- Window sash opens seamlessly to 45°
- Single handle operation at the bottom
- Double and triple low emissivity glazing prevents heat escaping through windows
- Thermal insulation system pre-fitted
- Maximum headroom and panoramic view

### **ETR4**

#### **Manual Opening centre-pivot roof window**

- Centre-pivot opening
- Double low emissivity glazing

### **ETR6**

#### **Manual Opening Centre-pivot roof window**

- Centre-pivot opening
- Double low emissivity glazing
- Optional thermal insulation system pre-fitted

## Intelligent Motion

### Electronic Opening Roof Windows

#### **ETRi8**

##### **Intelligent Opening top-hung roof window**

- Window sash opens seamlessly to 45°
- Double and triple low emissivity glazing prevents heat escaping through windows
- Thermal insulation system pre-fitted
- Maximum headroom and panoramic view

#### **ETRi4**

##### **Intelligent Opening centre-pivot roof window**

- Centre-pivot opening
- Double low emissivity glazing
- Optional thermal insulation system pre-fitted
- Designed for spaces that are difficult to access

#### **ETRi6**

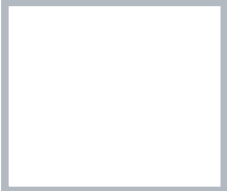

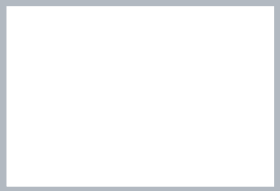

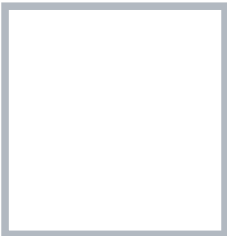

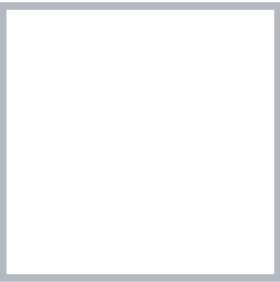

##### **Intelligent Opening centre-pivot roof window**

- Centre-pivot opening
- Double low emissivity glazing
- Optional thermal insulation system pre-fitted
- Designed for spaces that are difficult to access

## INSTALLER TIP

- Please refer to manufacturers opening sizes for recessed flashings

Usage: from 20° to 65° with standard flashing. Recessed flashing from 35° to 65°

**7/9, 7/11, 7/14, are all 'Means of Escape' as standard**

## Functionalities

Plenty of headroom  
Top-third pivot point

Ventilation - easy and practical

Easy and safe cleaning in cleaning position

## Traditional appearance

The Easy-Trim Roto conservation roof window combines traditional appearance with modern technology to provide an energy-efficient product which blends perfectly with natural roofing materials. Based on the ETR7 technology its high pivot position provides more headroom while minimising the extent to which the frame protrudes into the living space. The operating handle positioned in the base of the window makes life easier too.

Window size	5/7	5/9	6/11	7/9	7/11	7/14

## ETR8 Top Pivot Roof Window

PVC

### The benefits at a glance

- Easy and quick to fit: supplied fully assembled
- Panoramic, unobstructed view with maximum headroom. Hinged at the top of the window for a seamless opening to 45 degrees
- More energy savings: vapour barrier and pre-fitted insulation collar as standard for high thermal insulation and better air permeability
- Easy handling: one handle at the bottom of the sash for all functions (opening, ventilation and cleaning)
- Security: four point central locking system and cleaning position locked to secure maintenance

Usage: from 20° to 65°

**7/9, 7/11, 7/14, 9/16 are all 'Means of Escape' as standard**

## ETRi8 operation

The ETRi8 is a ground-breaking new development that redefines the meaning of comfort and ease of use roof windows. An automatically operated roof window with no visible drive components to spoil the view outside. The drive technology is concealed within the window and opens significantly more quickly than the systems used in conventional electric roof windows. The best thing is, you have a choice of how to operate it. You can use buttons integrated in the frame, a wall switch, remote control or even your smartphone or tablet. It's a level of comfort and convenience not available until now.

Two switches integrated into the frame allow you to comfortably open and close the window, and set the window to semi-automatic cleaning position. Additional accessories for easy operation of the ETRi8:

### By wall switch

**Switch control 230 V**  
ZEL STG S

### By remote control device

**Remote control unit**  
5 channels  
ZEL STG HS 5 II

**Remote control unit**  
10 channels  
ZEL STG HS 10 II

**Remote control unit with time switch**  
ZEL STG ZSU HS 10 II

### Via smartphone / tablet

(available separately)

Via wireless/Wi-Fi box from Becker, the ETRi8 and ETRi4 can be operated with any Wi-Fi-compatible end device  
CC 31, CC 51

# BECKER

Whether its windows, roller shutters, garage doors or other household appliances such as heating control and lighting ... You can program and control all of this centrally via Becker CentralControl - even while on the move.

This is made possible by the B-Tronic, our bidirectional automation system in which all smart home devices report their status immediately. With this simple home control, you can see at a glance whether everything is as it should be and can access your home automation system when needed - even whilst on the go.

CentralControl by Becker is based entirely on you and your individual needs. At home, convenient access is provided via the touch screen of the control panel, the notebook or the TV screen. When away from home you can access your CentralControl flexibly with your smartphone or tablet, and is easily connected with other home devices such as music systems, TV and web devices.

## Central home control - The future for your home

Set up a morning wake up programme, lights, blinds, music, even set the coffee maker going.

Open windows and blinds along with all other automated devices in your home direct from your phone or tablet.

Access and control audio and visual content anywhere in your home with the Becker system that can easily network devices from other manufacturers.

Forgot to shut the garage door?  
Close it on the move direct from your phone.

See a live video of blinds and doors shutting with your command on the go for total peace of mind.

Set up energy saving modes to reduce heating and electricity costs when you're out or during the night.

“Alexa, CentralControl is now ready for you...”

Becker-Antriebe's central home automation system easily controlled by voice

### Compatible, clever, comfortable

The advantage of Becker's innovation is obvious: it adds even more flexibility and makes controlling your own smart home devices easier than ever. In doing so, Becker remains true to its philosophy of creating compatible interface solutions. Because that's where the pioneers see the future of intelligent home automation.

The CentralControl system can be easily programmed for alexa phrases for example “TV, cosy”. When activated, the blinds in the living room close a little and the lights go out, and the tv is switched on.

# Flashings

## Standard and modular flashing

### System and precision

Our large choice of roof connections is the result of a system that is both sophisticated and flexible.

There are connections for individual windows, for combinations of several roof windows, for recessed windows, for flat roof installation frames or combining roof windows.

We attach the greatest importance to the thermal insulation and waterproofing of our systems, and we also offer a connection kit to the roof boarding screen.

### Modular connections

All configurations are possible with Easy-Trim Roto modular connection systems. Do not hesitate to call us to assist with the design of your project.

### The benefits at a glance

- Adaptable to a multitude of roof types
- Wide choice of standard or optional exterior finishes
- Connection components allowing a multitude of combinations
- Long-term protection against climatic conditions

Please seek manufacturer's advice for tiling and slating into the side of the roof windows and check minimum pitch of tile/slate being used

## Flashings

### Roof covering

#### ZIE Pantiles or profiled tiles

- Aimed for roof pitches from 15° to 90°
- Flashing for installing one roof window in flat or profiled roofing materials
- Not for interlocking slate
- For tile materials from 15 to 45 mm height

#### SDS Interlocking slate

- Aimed at roof pitches from 22.5° to 90°
- Flashing for installing one roof window into interlocking slate

#### SNO Slate

- Aimed for roof pitches from 15° to 90°
- Flashing for installing one roof window into slate up to 15 mm thickness
- Not for interlocking slate
- Coupled version also available

#### SNH Plain tiles

- Aimed for roof pitches from 15° to 90°
- Flashing for installing one roof window in plain tiles (max. length 270 mm)
- Maximum thickness of 15 mm

#### MUN Pantiles or hi-profiled tiles

- Aimed for roof pitches from 15° to 90°
- Flashing for installing one roof window in flat or profiled roofing material up to 120 mm in profile
- For tile materials above 45 mm height

**Please refer to the tile manufacturer's fixing specification for full installation details**

### Flashings

#### EDR: Standard flashing

- Minimum roof pitch 15°

#### ETL: Recessed flashing

- Minimum roof pitch 35° without IC (ETR4/ETR7)
- Minimum roof pitch 35° with IC (ETR4/ETR7/ETR8)

#### EFA: Flashing for combining roof window

- Minimum roof pitch 15°

### Installer's tip

To ensure air permeability all flashings have to be installed under the double EDPM rubber seal

## Modular flashings

### Single flashing (1x1)

#### **A** EDR Rx 1x1 single flashing, consisting of:

- a) EDR Rx O + U Top & bottom single flashing
- b) Water drain channel (except for metal roofing)
- c) EDR Rx SEB U Bottom flashing side-parts
- d) Mounting clips

### Multiple 'stacked' flashings (1x2)

#### EDR Rx 1x2 single flashing, consisting of:

- A** EDR Rx 1x1 Single flashing (incl. water drain channel, except for metal roofing)
- F** EDR Rx MEB Flashing central part
- K** EDR Rx SEB O Top flashing side-parts

### Multiple flashings (3x2)

#### EDR Rx 3x2 Multiple flashing, consisting of:

- B** EDR Rx O + U L Left-hand top & bottom flashing (incl. water drain channel, except for metal roofing)
- C** EDR Rx O + U M Centre top & bottom flashing (incl. water drain channel, except for metal roofing)
- D** EDR Rx O + U R Right-hand top & bottom flashing (incl. water drain channel, except for metal roofing)
- E** EDR Rx UBL U Bottom U-gutter flashing incl. flashing shrouds
- G** EDR Rx MEB L Left centre-part flashing
- H** EDR Rx MEB M Centre centre-part flashing
- I** EDR Rx MEB R Right centre-part flashing
- J** EDR Rx UBL O Top U-gutter flashing incl. flashing shrouds
- K** EDR Rx SEB O Top flashing side-parts
- L** EDR Rx SEB U Bottom flashing side-parts

For better identification purposes, the box labels include the corresponding code letters (in circles).

## Side-by-side, stacked or quad flashings

### The benefits at a glance

- Multiple window combinations enable customers to select any desired width, with window heights of up to 1.80m
- Easy reach handle positioned at the bottom of the frame.
- Optimal space utilisation and light yield
- Perfect interior appearance
- Combination installations provide more light creating the impression of a continuous glazed area.

Please ask the Easy-Trim Roto technician about the achievable gaps between the windows

## Accessories

### The Easy-Trim Roto modular system

#### Choose the right accessory to enhance your space

When you choose a roof window, you think of the practical aspects first – generous and bright spaces, functionality and technical specifications. However, of all the windows and door frames of a house, it is the roof window that is the most exposed to all types of attack (heat, rain, ice, forced entry). Paradoxically, it is the least protected. This is why only a good choice of exterior and interior accessories will give you the window that is most suitable for the needs of the end user.

#### Brightness and comfort guaranteed in all your rooms

Controlled light, regulation of the ambient temperature, optimum perspective... Easy-Trim Roto exterior sun protection or interior decoration equipment allow you to give meticulous care to your living space. With Easy-Trim Roto you can choose from a multitude of options: roller shutters, exterior sun blinds, interior PVC finish, interior blinds, black-out blinds, venetian or pleated blinds, manually or electrically controlled.

#### Accessories to bring comfort or to give convenience

Installed at the same time as the roof window, or added later depending on the needs of the user, Easy-Trim Roto exterior and interior accessories are both flexible and multipurpose.

#### The benefits at a glance

- Wide range of accessories
- Stylish yet functional accessories to suit all projects
- Efficient protection against heat, cold and burglary
- Wide selection of patterns and colours available
- Adds value to converted roof spaces
- Extends solar protection provided through the control of natural light and temperature rise
- Wide palette of patterns and colours available to suit you
- Efficient protection against heat, cold and burglary (roller shutter)
- Simple and fast fitting from the interior positions (open, ventilation and cleaning)

## Exterior sun screening

### External blinds and roller shutter

#### Exterior roller shutter

##### Protects from heat, protects from cold

Effective heat protection is achieved, when the heat radiation is reflected, before it reaches the window pane. Accessories positioned on the roof window's exterior are for this reason the first choice. The Easy-Trim Roto electrical exterior roller shutter fulfils particularly high requirements. It doesn't just control brightness and darkness. It also creates a comfortable living atmosphere by supporting and increasing the effects of the Easy-Trim Roto safety insulating glazing – an ideal supplement to Easy-Trim Roto roof windows.

#### External awning

##### Heat protection without darkening

If heat rather than light needs to be deflected use the Easy-Trim Roto electrical external awning. Approximately 95% of the heat radiation can be deflected this way, before it reaches the window pane. A high level of efficiency and air circulation between the textile and the window pane provide for a pleasant room climate – ideal for example when working in an attic office. The ventilation is no problem: The external awning works in every sash position without any restrictions.

#### 'Screen' exterior blind

##### Sun screening

Effective thermal insulation contributes considerably to living comfort during the summer months. The Easy-Trim Roto 'Screen' exterior blind with its plastic-coated glass fibre fabric, ensures that approximately 70% of the heat radiation doesn't reach the window pane in the first place. Even if the blind has been pulled down, the roof window remains fully functional without any restrictions. Combining exterior blinds with interior accessories is recommended.

## Benefits at a glance

#### Exterior roller shutter

- Fully operational when the window is open
- Optimal sun and heat protection
- Electrical drive unit as standard
- Fast and uncomplicated installation from the inside

#### External awning

- Perfect heat protection, optimally matched to the roof windows
- Fast and uncomplicated installation from the inside
- Fully functional when the window is open

# Blackout roller blinds

## ZRV

### The benefits at a glance

- Blackout without lateral light transmittance\*
- Pull bar seamlessly guided in lateral tracks
- The close fitting design limits the air exchange between roller blind fabric and the glass pane
- Limits temperature increase when combined with 'Screen' exterior blind
- Profiles available in white or anodised aluminium
- Easy installation due to the preassembled casing

\* Not absolute darkness in the physical sense.  
In summer not sufficient as solar protection,  
recommended in conjunction with an exterior blind.

## Other accessories

### Remote control unit

ZEL STG HS 5:  
5 channels

ZEL STG HS 10:  
10 channels

#### Product description

- The highest level of convenience is provided by the electric radio-controlled version
- The radio receiver for this is already integrated in the control system
- The remote control operation is carried out via the five or ten channel remote control which has to be ordered separately

### Switch control

ZEL STG S

#### Product description

- In order to meet the multiple customer requirements for standard electrical switch operation, we also provide the conventional, wirebound electric version
- A commercially available switch or a switch from Roto is needed; this however must be ordered separately
- A commissioning set is enclosed

### Wireless switch control

ZEL STG WS 1

#### Product description

- Radio frequency interference-insensitive
- Long range
- Separate buttons for up / stop / down command
- Simple installation
- Between programmable position
- Individual, group and central control

### Lockable handle Designo R8

ZUB GRF ASB  
ETR8 White

ZUB GRF ASB  
ETR8 Metallic

#### Product description

- Lockable handle available for ETR8 in timber and PVC (please indicate the roof window's name plate when ordering)

## Lockable handle ETR4/ETR7 and WDA

### Product description

ZUB GRF ASB ETR7/ETR4

# Easy-TrimRoto ETR7

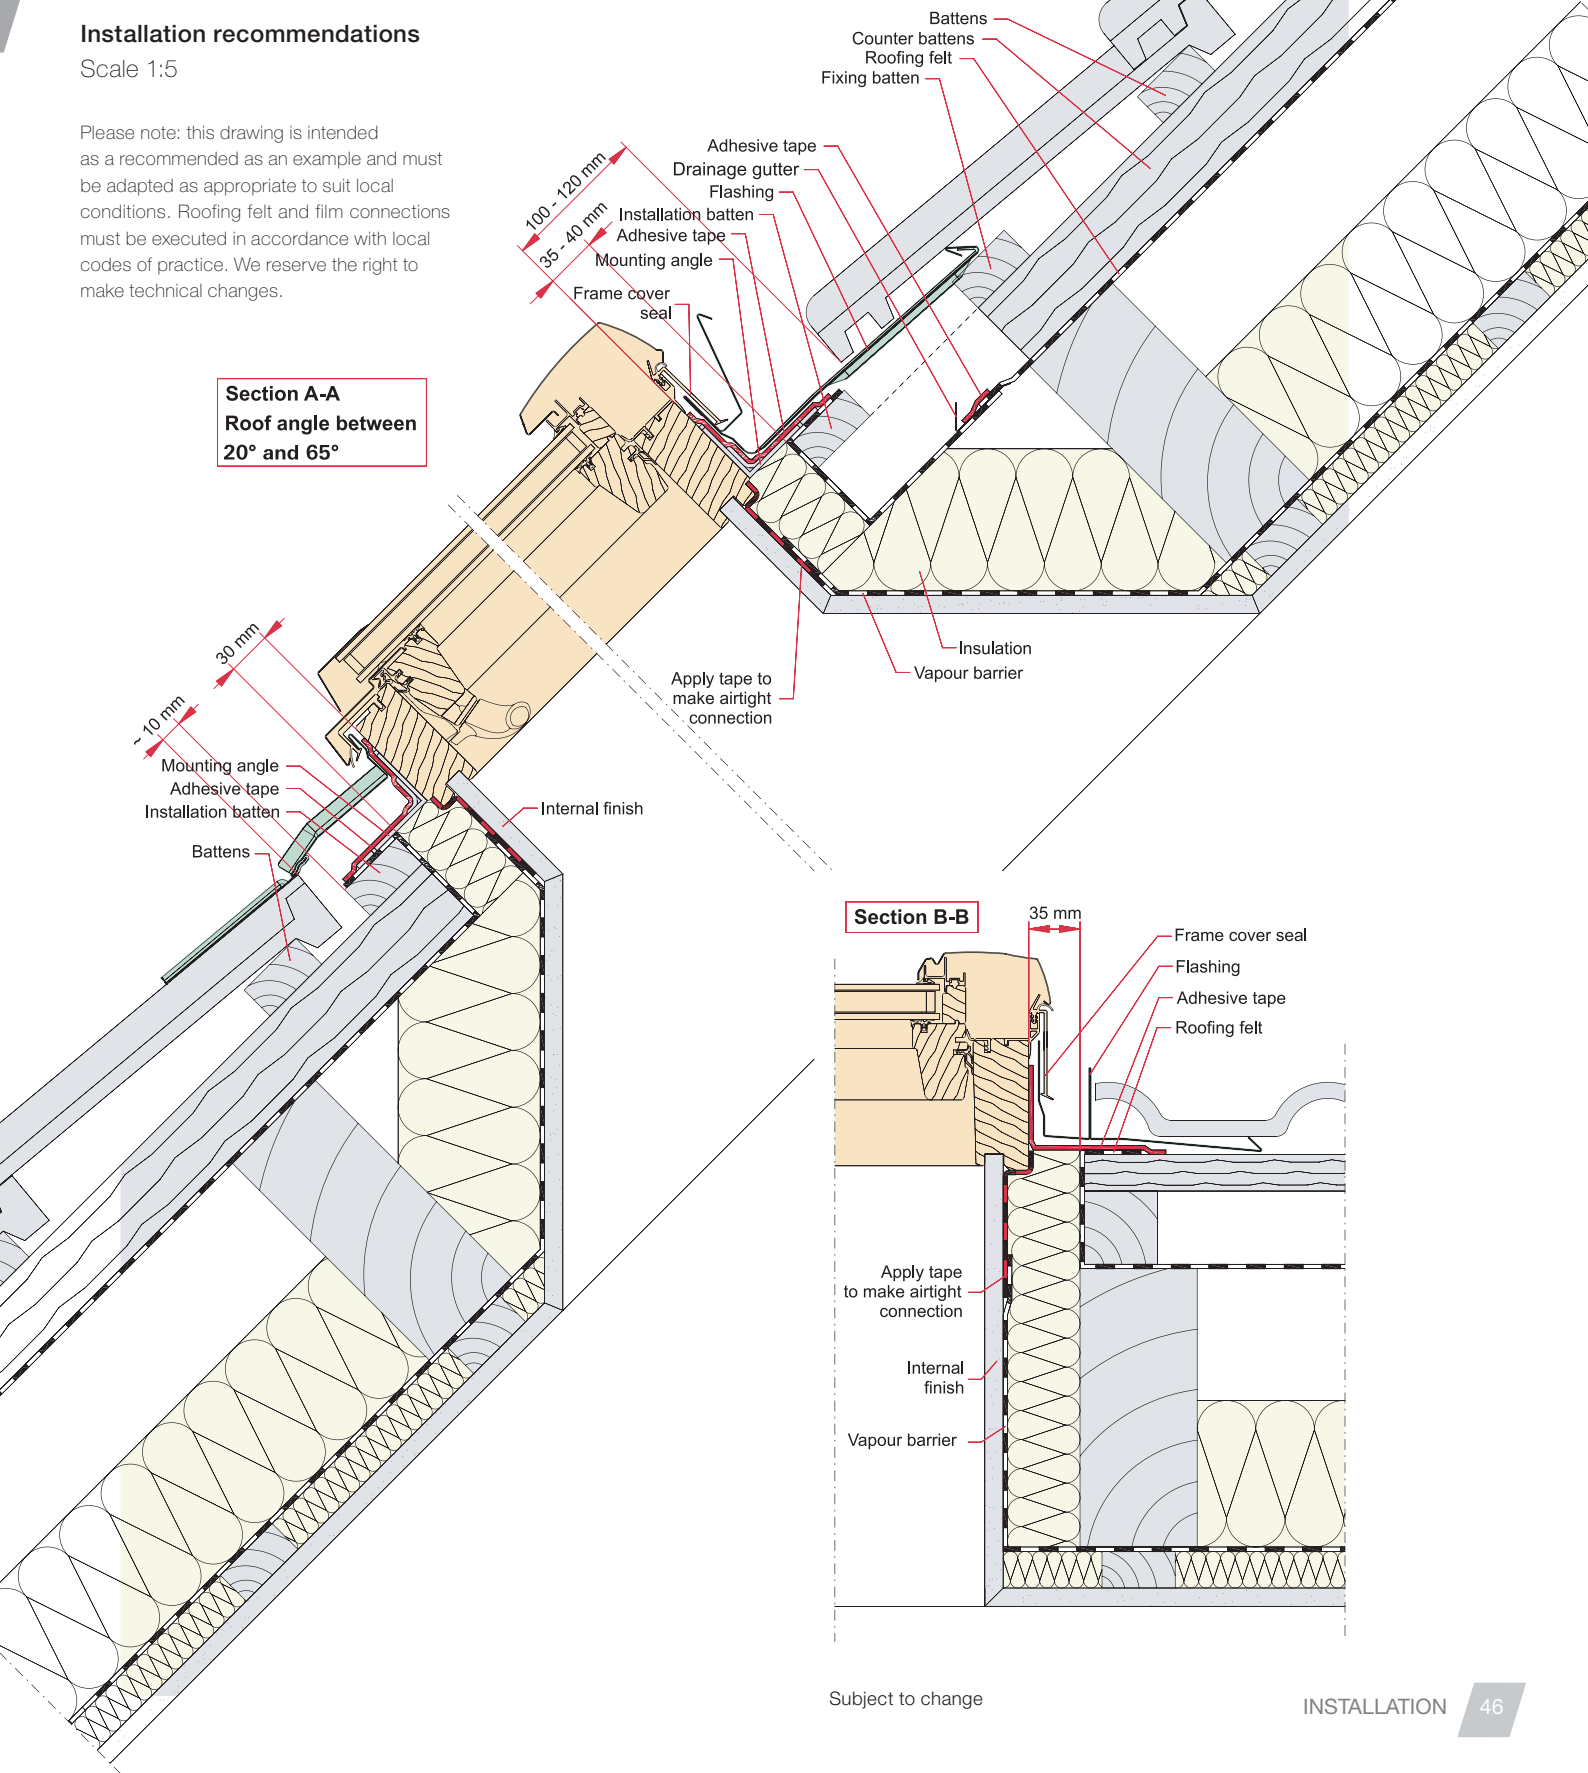

## Single installation into a tiled roof

### Installation recommendations

Scale 1:5

Please note: this drawing is intended as a recommended as an example and must be adapted as appropriate to suit local conditions. Roofing felt and film connections must be executed in accordance with local codes of practice. We reserve the right to make technical changes.

#### Section A-A Roof angle between 20° and 65°

## Warranty

### Quality prevails

Any Easy-Trim Roto product purchased in the UK after 1st Aug 2007 is guaranteed subject to the following warranties:

#### A 15-year materials warranty

on Easy-Trim Roto roof windows against the following types of breakage:

- for windows with toughened outer safety glass panes, glass breakage caused by hail
- breakage of the fittings  
(excluding any accessories or any part of the Easy-Trim Roto solar system)
- breakage of plastic frames in circumstances where the frames have not withstood the level of stress necessary to comply with the RAL quality mark 716/1

#### A 5-year warranty

on the following types of defects due to material, construction and/or production faults:

- defects in Easy-Trim Roto roof windows including frames, other than defects falling under the item above
- fogginess in between the panes defects in Easy-Trim Roto solar systems, with the exception of all electrical and moving parts

#### A 2-year warranty

on defects due to material, construction and/or production faults in:

- Easy-Trim Roto accessories for roof windows (interior roller blinds, outside roller shutters, remote controls, etc.)
- electrical and moving parts of the Easy-Trim Roto solar system
- replacement parts which are supplied in the event of a guarantee claim in exchange for defective Easy-Trim Roto roof window parts, unless the remaining period of the original warranty is longer than 2 years, in which case the warranty on the replacement parts shall be for the remaining period of the original warranty
