Honeywell Home

Room by room, controlled comfort, made simple.

evohome smart zoning thermostat

Introducing the evolved evohome

Smarter. Leaner. Better.

evohome is a smart zoning system that supports up to 12 zones in the home – all from one place. And with new features, it's now even smarter.

With evohome, customers choose our smart zoning solution because it provides comfort and control where and when they need it. evohome can also help save energy by only heating rooms that are being used.

Professional installers choose evohome for an outstanding installation experience, thanks to a modular platform built to support you every step of the way.

Smart wireless zoning

The evohome display is at the heart of the system and connected with each product, via wireless 2-way communication; working together to offer your customers comfort and peace of mind.

The evolved evohome simplifies installation, offers wide application coverage, and features secure technology – all with fewer components.

Wider application coverage

The new Appliance Control Module makes evohome compatible for almost every household heating and cooling appliance, from heat pump and hybrid solutions to conventional & modulating boilers, as well as district heating.

First time right installation

The intuitive guided configuration supports you step by step through the installation, reducing installation labour and time.

Simplified selection

The leaner, streamlined product range makes selection and set-up easier, allowing flexible zoning solutions with fewer components and reducing complexity.

Reliable communication

The enhanced wireless communication is designed for the home and enables over-the-air updates, certified to European cybersecurity standards.

evohome

The smart zoning solution with a multitude of possibilities.

Smart weather
Optimised individual zone comfort control based on outside temperature, room temperature and setpoint.

Advanced load scaling
evohome automatically learns each zone's heat capacity to better control the boiler's output. It can limit inefficient high return temperatures, letting the boiler run at a lower rate.

Wireless communication
Easy installation,
no décor disturbances.

Connected
Built in WiFi for smart control

Flexible, adaptable and expandable

Suitable for heating and cooling, evohome adapts to your customers' comfort needs. You can easily install additional products when customers expand their existing installation.

Simple hand-off
Intuitive full-colour
touch screen user interface.

Smart zoning
up to 12 zones
controlled individually.

Smart partners
Works with IFTTT, Google
Assistant and Amazon Alexa.

Quick action features
Away, economy, day-off and
system-off mode

Comfort when needed
7-days bespoke scheduling with up
to 6 time/temperature periods a day
for each zone individually.

Heat and cool temperature control
Easily switch between heating and cooling
mode. Helps you keep comfortably warm in
the winter and cool in the summer.

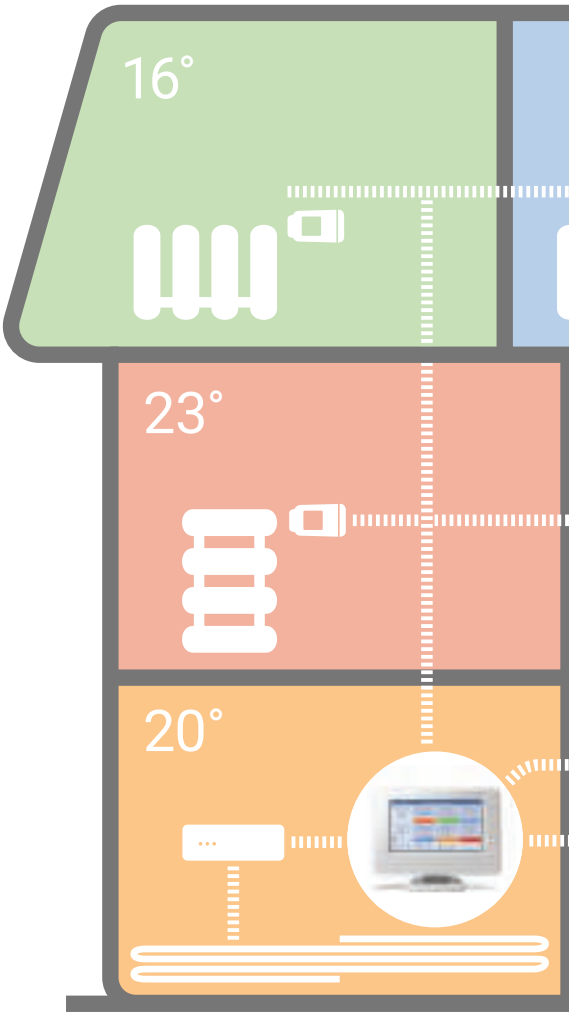

evohome

Suitable for a wide range of domestic applications

Every hydronic heating system is different. evohome is suitable for most applications – from luxury apartments and family homes to multiple occupancy and apartments, or even light commercial spaces such as doctors' surgeries and small offices.

Radiators, on/off or an OpenTherm modulating boiler? Underfloor heating, district heating or heat pump?

Just install evohome.

evohome display

ATC938

The evohome display is the brain of your evohome system, allowing you to install and control up to 12 zones from the display. It features:

- Built-in WiFi
- Over-the-air updates
- Easy-to-follow guided installation

Radiator control

HR93

The HR93 measures and controls the temperature in each room, featuring:

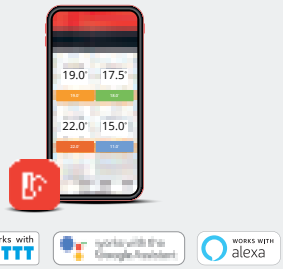

- Easy installation – Fits on the most common radiator valves
- Open window feature that shuts off the radiator when room temperature drops
- Large adjustable display with backlight
- Zone identification
- Frost protection

Underfloor control

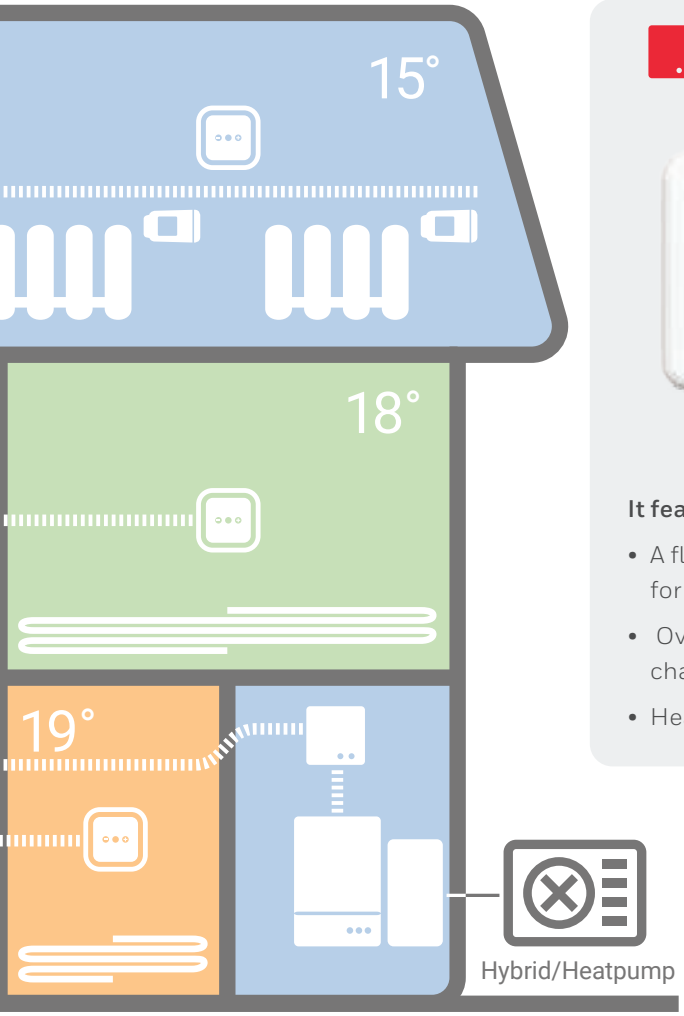

HCC100

Smart control

Customer control, however and wherever they want it. evohome can be controlled:

- Locally in the room
- Centrally on the display
- Remotely through the app
- By voice assistant

Appliance control

R9H

The R9H Appliance control module includes 2-channel On/Off and OpenTherm outputs and sensor inputs, enabling it to control multiple applications. It is compatible with

- On/off boiler
- Zone valve
- Modulating OpenTherm boiler
- Heat pump
- District heating
- Pellet burners
- Electric heater

It features:

- A flip-up wiring platform for easy wiring
- Override button per channel
- Heat/cool change-over

Room control

DTS4

The DTS4 measures the room temperature and provides an easy control point in combination with underfloor or when multiple radiators are used in one zone:

- Wall-mount & table-top
- 3 colour options to suit any home décor

The HCC100 controls the underfloor heating and cooling for 8 individual zones:

- Up to 20 thermal actuators
- Integrated pump control
- Wired & wireless thermostats
- Configuration via Resideo Pro app

Helping you find your comfort zone

evohome is simple to install and easy to maintain.

As an evohome installer, you are never alone. We offer end-to-end support wherever it's needed, from helpful hints and tips to full courses.

You can configure your tailor-made evohome solution solutions effortlessly via a phone, tablet or laptop with evohome System Builder:
