PolyPlumb[®] Push-Fit Plumbing System.

For over 25 years, PolyPlumb[®] has served as a tried and tested staple of the residential plumbing market. Our original, robust and reliable grey push-fit plumbing system, PolyPlumb[®] continues to be one of the most popular fittings for plumbing professionals.

As we strive to push the boundaries of innovative technology and progressive design, the PolyPlumb[®] system you know, and love has been improved. Now updated with a fresh new look and patented In-Cert[®] feedback technology, the new PolyPlumb[®] Enhanced fitting continues to deliver the reliability and confidence you've grown to expect from Polypipe Building Products.

PolyPlumb[®] fittings still feature the robust, stainless-steel grab ring, along with the same trusted pre-lubricated EPDM O ring that's always been at the heart of the fitting, ensuring continued joint integrity.

Feel it to believe it.

'The plumber's choice of classic, dependable grey push-fit system now looks better, feels better and performs better. Fit one of the patented In-Cert[®] Stiffeners into the Polypipe Polybutylene pipe end before inserting into the new PolyPlumb[®] fitting and the In-Cert Feedback Technology gives you confidence that the joint has been made. The head of the In-Cert[®] stiffener features patented geometry which combines with the fitting body to centralise the pipe, and, with a twist, you know that the pipe has been fully inserted. Push, twist, know.'

Use PolyPlumb[®] fittings and In-Cert[®] Stiffeners with Polypipe polybutylene flexible pipe, or you can combine PolyPlumb[®] fittings and copper pipe (no stiffener is needed with copper pipe).

Polypipe Building Products metal or plastic pipe stiffeners can still be used with polybutylene pipes and the new PolyPlumb[®] fitting, and you can also use the In-Cert[®] stiffener with the previous version of PolyPlumb[®] however you won't get the benefit of the In-Cert[®] insertion recognition technology with these combinations.

PolyPlumb[®] is suitable for use in most plumbing and heating installations, including hot and cold water and underfloor heating applications.

The system offers several benefits:

- Our enhanced grey push-fit plumbing system, using tried and tested technology for over 25 years.
- Now available in both grey and white fittings
- PolyPlumb[®] provides a superb combination of fast fitting with a permanent, reliable fix, now with patented In-Cert[®] feedback technology.
- PolyPlumb[®] offers a jointing process, with joint integrity assured by a robust stainless-steel grab ring.
- Secure; demountable by disassembly only. (Do not reuse the stainless-steel grab ring)
- Use for most hot and cold-water supply and heating applications, including underfloor heating.
- Use with Polypipe polybutylene pipe or copper pipe.
- Use with new patented In-Cert[®] feedback technology stiffeners for added confidence.
- 50-year guarantee.
