Hip and ridge sealing tape Fabric, 20 cm black/white. Aluminium 75 mm x 0,14 Butyl 20 mm x 1mm

Hip and ridge roof tape made of two strips of pleated aluminium and double polypropylene fabric, with very high resistance to UV-rays. With the butyl self-adhesive, 20mm-wide strips and flexible profiled edges, the tape is easy to assemble. Resistant to mechanical damage, weather conditions and UV-rays.

Expert roof tape to be used under the roof peak lines, ridges and ridge caps, with extended useful life obtained owing to the use of high quality anti-UV stabilising components.

• sealing and ventilation of the roof ridge space• protection against precipitation• improved water evacuation from crucial sites• versatility – suitable for all kinds of roof coverings• resistance to UV radiation• easy to use

6 320

4 rol + accesories

120 x 80 x max 210 cm

Intended for roof plane ventilation and roof ridge protection against insects or blown in snow and water. The tapes are placed on ridge battens on roofs covered with roof tiles or roofing sheet, under ridge caps. Suitable for sloping ridge battens. Assembly in accordance with the instruction.
