AXIOME® : Opal

The Opal tint AXIOME® sheet provides a white tint impression. The advantages of this Opal AXIOME® tint are that it provides a degree of privacy whilst maintaining a good light transmission and a bright overall appearance. In addition the Opal tint reduces the level of solar energy entering the sheet, keeping covered areas cooler when installed in areas exposed to higher levels of direct sunlight.

AXIOME® sheets come in several thicknesses which provide solutions for various applications. This chart shows the relative benefits between each option.

Thickness	Qualities / Benefits
6mm Twinwall	Fits most Greenhouse beads, high light transmission, best bending radius
10mm Twinwall	Good bending radius
16mm Triplewall	Stronger structure than twinwall, average insulation value
25mm Multiwall	Good Insulation, good structural loading capacity
35mm Multiwall	Higher insulation value, best structural loading capacity
AXIOME®-80 76mm Multiwall	High thermal insulation value, good loading capacity, sonic sound noise reduction layer (SNR)

Colour Concepts

There are several myths surrounding each tint, for example whilst bronze sheet offers a shading effect, it does not reduce the heat, in fact it attracts more heat. We have set out the guidelines to explain the properties provided by each shade.

What Colour?

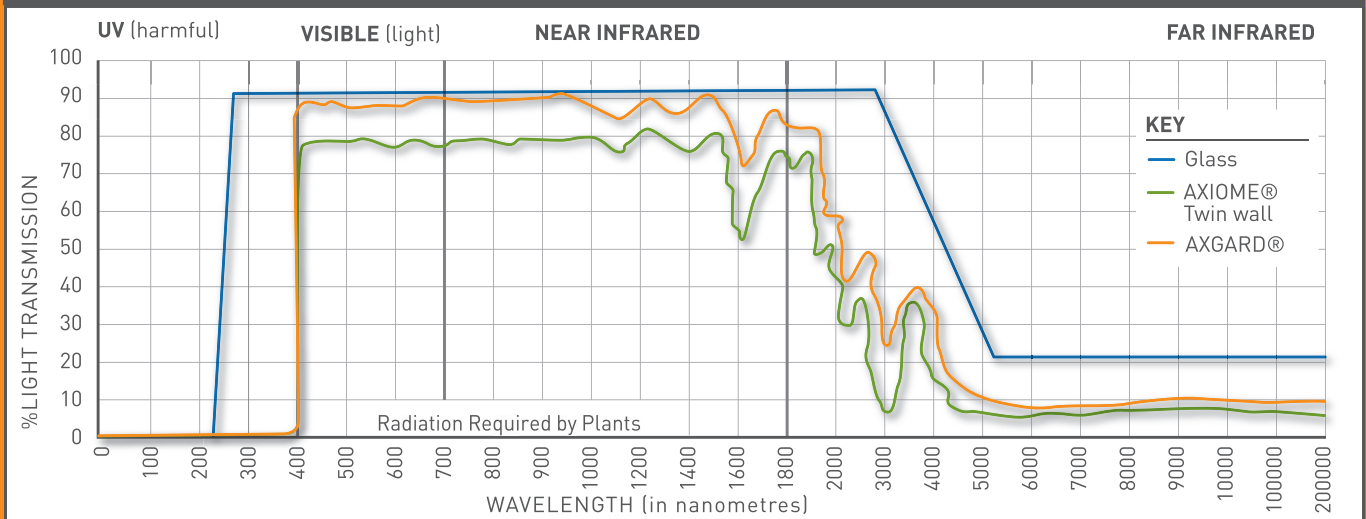

Colour	Qualities / Benefits
Clear	Maximum light transmission and brightness; protects from harmful UV
Opal	Reflects some heat, provides shading and privacy
Bronze	Reduces glare and provides shading, will tend to increase heat build up
Clear Silver SOLEK®	Rejects approximately 80% of the solar energy dramatically reducing heat build up
Silver Bronze SOLEK®	Rejects a high degree of solar energy, reducing heat build up and provides shading

AXIOME® : Light Transmission

AXIOME® polycarbonate almost totally blocks harmful UV radiation whilst still allowing exceptional levels of visible light transmission.
