

## *Ariel Roof Ventilator*

- Effective ventilation for conservatories
- Allows hot air to escape from roof
- Fits 10mm, 16mm and 25mm polycarbonate
- Can be retro fitted

### **Description**

Ariel Roof Ventilator is a continuous ventilator designed to allow the escape of hot air from the roof area of all types of conservatory. The unit is attractively designed featuring an external weatherproofing hood and internal air diffuser. The ventilator fits a hole of 162mm diameter and is supplied with a foam gasket to seal the unit to the roof. Spacers allow fitting to glazing materials from 4mm to 28mm thick.

### **Application**

The Ariel Roof Ventilator is designed to overcome the problems of excessive heat caused by lack of ventilation in conservatories. The ventilator is particularly suitable in situations where security concerns do not allow windows to be left open.

### **Performance**

Free air space – 7096 sq/mm
