Feb Serious Construction Chemicals

The key to successful plastering is all in the preparation

Febond BLUE GRIT is the ideal pre-plastering preparation for difficult, low bond substrates.

BLUE GRIT provides the extra grip bonding agent that is key to saving time and money!

Containing a fine aggregate, BLUE GRIT provides a mechanical key and is specially designed to provide an improved bond on all smooth surfaces. BLUE GRIT may be used on plaster, gloss painted surfaces, plastic laminates, ceramic tiles, particle board, textured surfaces, anaglypta and even glass!

BLUE GRIT is ideal for repair, maintenance and improvement projects where unusual and difficult surfaces may be encountered.

FOR THE FULL RANGE OF FEB PRODUCTS VISIT WWW.FEB.UK.COM
