GREEN ROOF TILE COMPANY

was formed to offer a sustainable and technically advanced alternative to the contemporary slate and roof tiles currently on the market.

We are fully committed to creating high quality roofing products, utilising sustainable resources.

Enviro**tile** ECO-FACTS

- One tonne of plastic diverted from landfill disposal prevents 1.66 tonnes of Co² emissions
- One tonne of plastic diverted from incineration or heat reclamation prevents two tonnes of Co² emissions
- Concrete produces 0.89 tonnes of Co² through it's production, and is the second most consumed commodity on the planet after water
- *Enviro**tile*** is completely recyclable; therefore further savings of Co² can be obtained
- *Enviro**tile*** weighs just 20% of a conventional concrete tile therefore saving approximately 110 tonnes of Co² emission for every 100,000 delivery miles (Defra)
- Traditional roofing materials require between 5-15% extra for breakages during transportation and installation - *Enviro**tile*** is virtually unbreakable
- *Enviro**tile*** is the choice material for Considerate Constructors and greatly assist with Sustainable Homes Standards
