

Hessiclip®

HESSIAN SHEET HOLDER

Hessiclip, the Safer Way to Build Designed and produced in the UK

The Hessiclip has been designed, developed and produced in the UK as an industry first to help minimise the risk of accidents and injury on building and construction sites from falling masonry. Hessiclip replaces the old method of precariously balancing bricks and blocks on top of hessian sheets during the curing process.

Produced in 'safety yellow' the Hessiclip is highly visible from the ground, helping to re-assure workers, visitors and general public that site safety is paramount.

Why use Hessiclips?

- Minimise risk
- Low cost
- Re-usable
- Manufactured in the UK
- Ease of use
- Versatile
- Recyclable

Designed for Safety

Minimise the risk on your building site...

Keeping workers, visitors and the general public safe on and around construction sites is a legal requirement. The Hessiclip has been developed with consideration to providing a safer building working environment.

Our product has been manufactured using a lightweight durable material. The flexible design is capable of withstanding all temperatures for prolonged periods when using brick, block or stone wall construction.
