The seamless choice in loft ladders

Clever design makes VELTA Loft Ladders quick to install and easy to use.

To optimise energy efficiency all trapdoors are designed with high insulating polystyrene inside a robust HDF sandwich construction.

VELTA Loft Ladders provide safe and easy access to your attic via a 3 or 4-section folding ladder, which is quick to operate and requires very little storage space. All ladders are designed with non-slip treads for extra safety and an advanced spring counterbalancing system for effortless control.

Job done with ClickFIX®

When you choose a VELTA Loft Ladder, you automatically benefit from a unique installation system that makes mounting the ladder fast and very straightforward. ClickFIX® Technology means that most components are fastened with a gentle push or a simple pull. Only a few brackets need to be fitted with a screwdriver.

ClickFIX® Technology in combination with lightweight construction makes installation safer and trouble-free

To make the job even easier, the weight of each VELTA Loft Ladder is up to 25% lighter compared to similar products. No single component weighs more than 8-11 kilograms, making the entire mounting process safe and controllable.

Save energy with extra insulation

There are three different models of VELTA Loft Ladders to choose from. Use this guide to help you choose the right model for you and we promise a quality VELTA Loft Ladder that will last for decades.

PREMIUM VELTA NLL 5620
