

## Linings

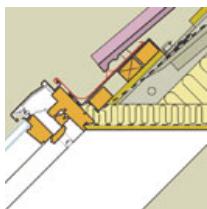

### Linings

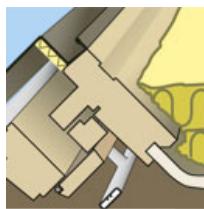

Our linings ensure a perfect join between your window and interior wall. Like all VELUX products, they meet the highest standards in quality, functionality, fit and design.

#### Major advantages of VELUX linings:

- Unique shape provides extra space for heat insulation.
- The vapour barrier collar protects your roof from condensation damage.
- Special window sills direct heat toward your window pane to reduce condensation and cold radiation.
- More exposure to daylight than with a typical box-shaped lining.
- Fits perfectly with your VELUX roof window and insulation products for a weathertight seal.
- Quick and easy to install.
- Easy-to-clean, durable white laminate surface.

**More insulation**  
The curved sections above and below the window create more space for insulation between your window and roof.

**Vapour barrier collar**  
To protect your roof from condensation, VELUX linings come with a vapour barrier collar, guaranteeing a weathertight seal.

**Extra light**  
The lining over the roof window is horizontal while the section below the window is vertical. This provides more light exposure than a box-shaped lining.

**Quick and simple**  
VELUX linings are prefabricated to make installation easy – without additional small parts, colours or adhesives.
