

# SOLUTION 1

In combination, this selection of products offers excellent performance, great internal and external aesthetics and our best possible installation method in terms of energy efficiency.

- White polyurethane (GGU) window with our --60 glazing
- Recessed flashing, supplied as a package with Insulation Collar and Underfelt Collar
- VELUX Vapour Barrier

<b>U-value</b>	1.3 W/m <sup>2</sup> K (lower u-value of 1.1 W/m <sup>2</sup> K can be achieved if ordered as an energy efficiency package, please call VELUX for more details).	The lower U-value, which falls well within regulatory requirements, allows for more scope in design such as increased glazed areas.
<b>Sound reduction</b>	37db.	Increased reduction of airborne sound and rain noise provides greater comfort.
<b>Glazing features</b>	Low E coating, krypton filled cavity, Clear and Clean coating, laminated outer pane.	Increased insulating value, reduced requirement for cleaning if placed in out of reach areas, additional safety.
<b>Finished installation height</b>	46mm above batten level at highest point.	The recessed flashing leaves the window closer to the roofline for a more streamlined external finish and increased insulative value of the overall installation.
<b>Internal finish of window</b>	White polyurethane.	Clean, stylish finish to match other white windows in the building, low maintenance, highly moisture resistant.
