No negatives here!

Acrypol + is one of the most successful waterproofing products in the country. The original and best cold applied solution, Acrypol + will instantly seal a roof, with just one coat.

Brush applied as a semi-liquid paste, Acrypol + is continually specified for its performance, seamless waterproofing properties and fast, heat free method of application. Acrypol + bonds immediately without the need for heat guns, bitumen, torches or adhesives.

A simple one-stop-shop system, Acrypol + has a proven track record of success. It can be applied in any weather – including damp conditions – for general property maintenance and day-to-day patching repairs. Suitable for small or large surface areas, it comes in two standard colours, Medium Grey or, for maximum solar protection, Solar White.

System 15 offers lasting appeal

System 15 from Acrypol is a cost-effective roofing solution for both new build and refurbishment projects and is guaranteed for 15 years. It offers incredible value for money and rapid installation without the use of naked flames or molten materials at roof level.

The package consists of a sealer/primer coat, a bedding coat incorporating a two dimensional stretch scrim, a binding coat and, finally, the Acrypol 15 finishing coat.

The result is a product that is quick and easy to install, offering architects,

specifiers and building owners the ultimate in long term integrity and value for money.

As time catches up on tired felt roofs, System 15 is ringing in the changes with a reputation that continues to spread.

Anti-slip passage

Quartzdek is a slip resistant waterproof system from Acrypol that ensures no exterior walkway, whether it's a balcony, stairs or roof garden, poses a slip hazard.

The secret behind Quartzdek is **real quartz granules** which are applied over a super-tough, flexible polyurethane waterproof resin, all sealed and bonded together with a final layer of resin. Quartzdek can be used over concrete, cement, asphalt and even quarry ceramic tiles.

It takes just a matter of hours to dry and can be applied without any disruption to the building, allowing occupants to carry on as normal inside. Combining high quality waterproofing with an effective non-slip surface, it provides comprehensive protection that will last for years to come.

Metal-Kote

Nu-Life

Failed metal roofs – massive 60% cost savings

Metal-Kote from Acrypol is the ultimate recession busting answer to failing metal roofs. Just a single coat will bring an entire roof back to life for just 40% of the cost of replacing it, and without the costly downtime.

In a tough economic climate, it is the perfect cost-effective solution for building owners and a product guaranteed to give contractors an edge when budgets are tight. It's fast acting and non-intrusive, so business can carry on as normal with no drop in productivity during application – including the most sterile of

environments, such as laboratories, medical buildings and food preparation areas. Even tears in the metal can be made as good as new with one simple application.

Why choose Metal-Kote?

- Outstanding value for money
- Excellent profit margins
- High customer demand
- One-coat application
- No primers needed
- Requires no specialist application knowledge
- Unrivalled pedigree
- 100% waterproof
- Suitable for flaking, rusting or peeling metal, plus plastic coated roofs
- Used extensively throughout the private, commercial and industrial sectors

Give your roof a Nu (lease of) Life

Nu-Life from Acrypol brings faded, discoloured and tired looking concrete tiles back to their former glory. An incredible solution, Nu-Life transforms roofs, making them look and perform more effectively.

Requiring only high pressure cleaning, an anti-fungal solution is applied followed by two coats of Nu-Life for long-lasting protection and a natural, attractive finish.

Turning back time and recreating the tiles' original colour, Nu-Life removes lichen, moss and fungi whilst protecting against porosity and frost damage.
