

Packexe®

CARPET

Carpets • Rugs

Choose the **RED** printed film for temporary protection of:

Carpets and Rugs

Sticking to the carpet without the need for tape, this film prevents the trip hazards normally associated with dust sheets, especially on stairs. It provides a low-slip surface even when wet, protecting carpets and rugs against spillages, heavy foot traffic, dirt and debris. The film can be vacuumed, swept or mopped throughout the project.

Its strong adhesive grips securely to carpet pile but is easily removed **without leaving a sticky residue**.

If used on non-carpeted surfaces this film may cause damage and be difficult to remove.

Packexe®

HARDFLOOR

Wood • Laminate • Tile • Stone • Vinyl

Choose the **BLACK** printed film for temporary protection of:

Wood, Laminate, Tile, Stone and Vinyl

Eliminating the slippage, leakage and lack of visibility hazards associated with dust sheets this film provides protection from spillages, scratches, dirt and debris during building, renovation and decoration projects. The film can be vacuumed, swept or mopped to keep the work area clean.

Its medium-strength adhesive grips securely to hard floors but is easily removed **without leaving a sticky residue**.

This film is not effective on carpet as it will shift, creating an unsafe surface.

NEW Packexe®

FLEECE

Delicate Surfaces

This film has a fleece layer that helps to reduce impact damage from objects dropping on to delicate surfaces, such as wooden or tiled flooring. The top layer provides a low-slip surface and protection from spillages, heavy foot traffic, scratching and other dirt and debris. The film can be swept, mopped and vacuumed throughout the project to keep the work area clean.

The low-tack adhesive makes it suitable for most surfaces, is easily removed and will not leave a sticky residue.

RE-USABLE

While this film can reduce impact damage from falling objects, it cannot protect from damage in all circumstances. Additional surface protection is advised for very valuable or fragile surfaces.

SUITABLE FOR MOST SURFACE APPLICATIONS

Packexe®

GLASS & GLAZING

Windows • Glass (internal and external)

Choose the **BLUE** printed film for temporary protection of:

Windows and Glass

This film protects windows from plastering excess, paint, sanding dust and dirt, eliminating the need to scrape the glass and risk scratching it. Its waterproof adhesive grips securely to interior and exterior windows but is easily removed **without leaving a sticky residue**.

Packexe® Glass & Glazing is also available in a narrower width for smaller glass areas with a lightweight dispenser for smooth coverage. The film is perforated for easy detachment from the roll with a simple twist action.

This film is not effective on carpet or flooring as it will shift, creating an unsafe surface.

Packexe®

INTERIOR SURFACE

Worktops • Tiles • Polished Surfaces (Glass, Metal, PVC)

Choose the **GREY** printed film for temporary protection of:

Worktops, Tiles and Polished Surfaces

This film protects polished surfaces, tiles and worktops against paint spillages, plastering dust, dirt and debris during renovation and decoration.

Its low-tack adhesive clings to smooth surfaces without shifting and simply peels away after use **without leaving a sticky residue**.

This film is not effective on carpet or flooring as it will shift, creating an unsafe surface.

Safe

- ✓ Secure hold - no tapes needed
- ✓ Low slip and no rucking - important on stairs
- ✓ No trip hazard - can see under film
- ✓ Safe left down 4 to 6 weeks - saves time
- ✓ Identifies fragile glass areas - lets light in

Clean

- ✓ Laid down clean - no dirt transfer
- ✓ Easily vacuumed, mopped or swept during the job
- ✓ Quick clean-up - saves time and money
- ✓ Less dirt and damage - more professional finish
- ✓ Peels away easily - leaves no residue
- ✓ Disposable - fully recyclable

Durable

- ✓ Waterproof - no leakage
- ✓ Less snagging on the project - saves time and money

Flexible

- ✓ Can work in all areas - no sealing off
- ✓ Covers large and unusual shapes
- ✓ Can cut film to access floor power points
- ✓ Dispensers for large areas - less labour time

Quality

- ✓ Traceability
- ✓ Meets European Fire Standard EN13501-1
- ✓ Quality Assurance

GUIDELINES FOR USE

The recommended maximum usage of Packexe® protection films is four to six weeks. The film can be stored for between six and twelve months, in original packaging at room temperature and in dry conditions.

CAUTION: PLEASE READ BEFORE USING THE PRODUCT

Due to the wide range of surfaces which this product may be applied to, we would expect users to carry out a test, before use, on a small area of the surface to be protected. This precaution should ensure full compatibility with our adhesive system.

Ensure that all lacquers, varnishes or other finishes have fully cured before applying protection film. Failure to do so may result in a transfer of marks from the branding onto the surface. Our self-adhesive protection films are designed for temporary surface protection against debris, spillages and potential scratches; they are not designed for protection against corrosion, humidity or chemicals. Do not use on PVDF, plastisol or polyurethanic paints.

We cannot be responsible for the misuse of this product, nor for the consequences of its usage for non-recommended applications. Furthermore, if you choose to use this product without first testing it to ensure compatibility with the relevant surface, then you do so at your own risk. The product guarantee is generally limited to the replacement of a product if it should prove to be defective and does not in any event cover claims for consequential losses.
