Components shown full size

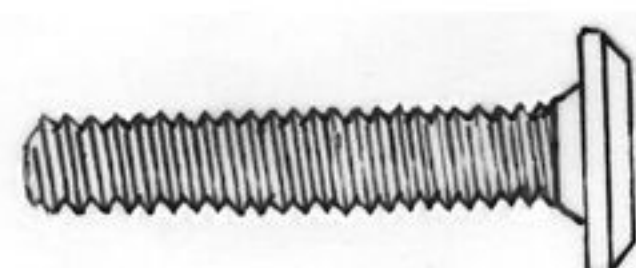

Large washer W

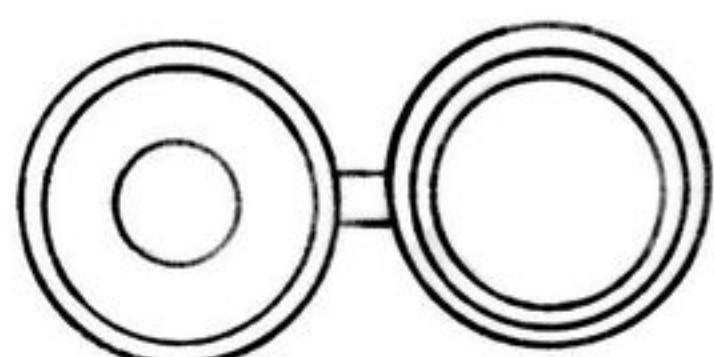

Cover button

19mm Short screw SS

30x6mm Bolt A

Snap-cap

Wall plug WP

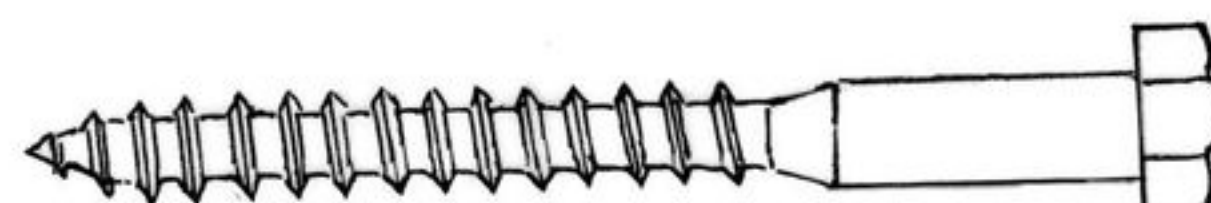

Plastic peg P

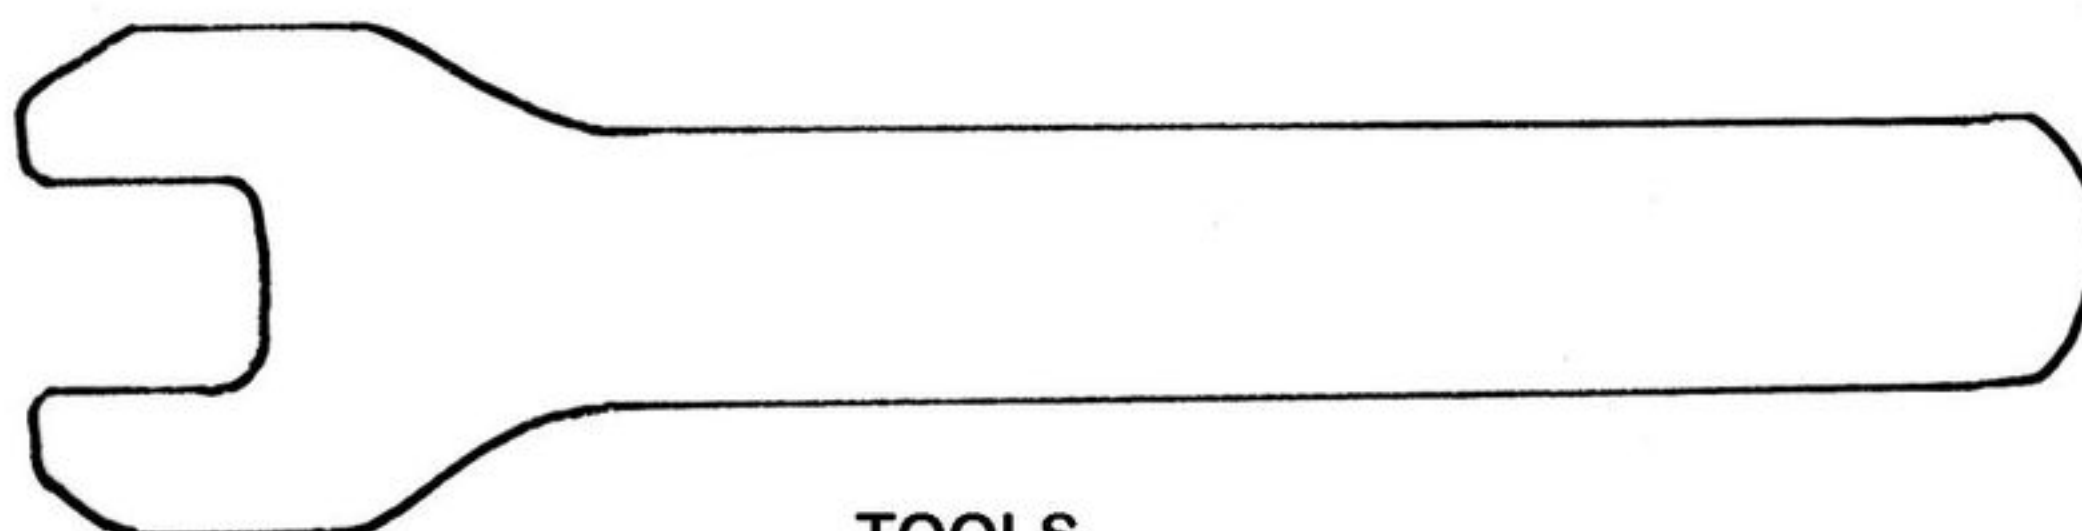

6mm Nut B

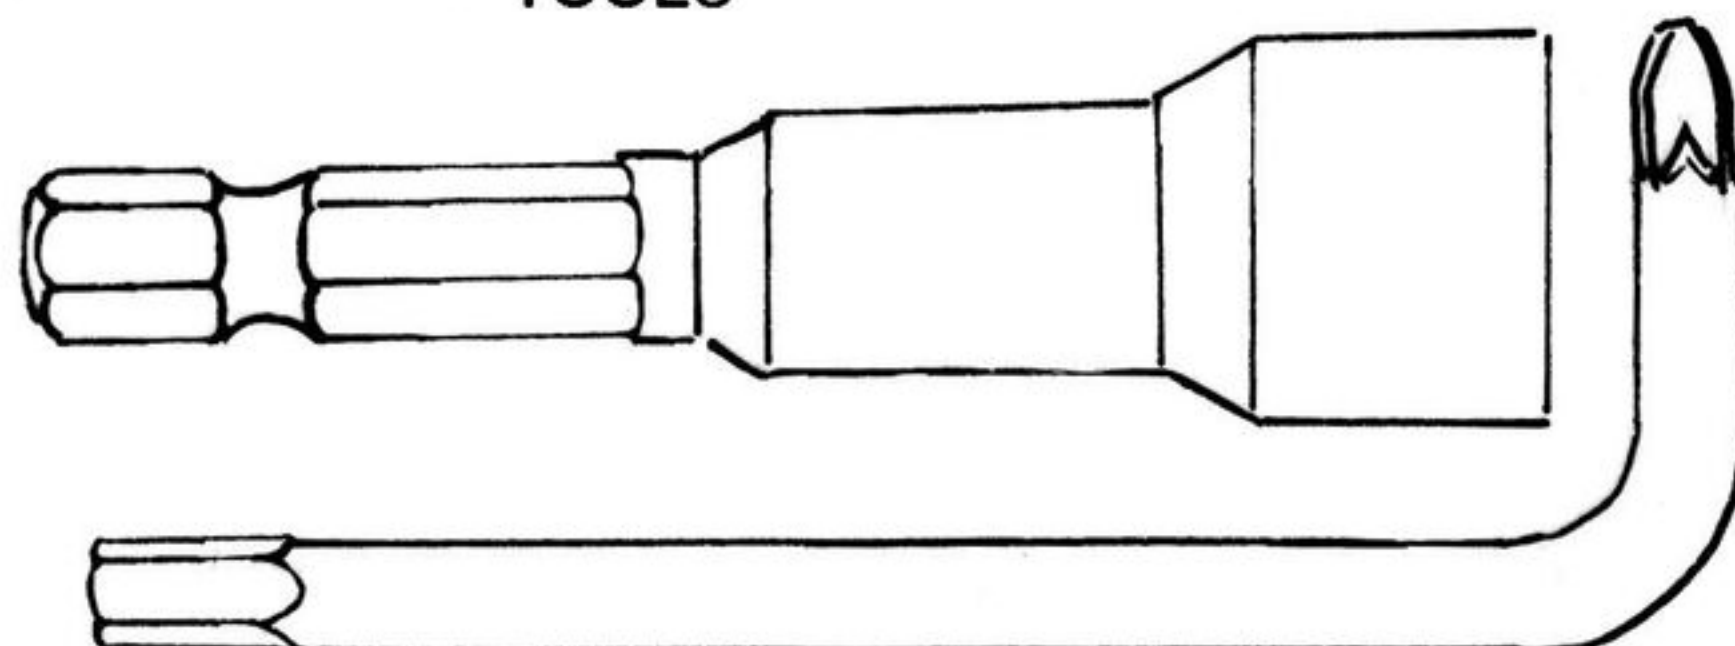

40mm Long screw LS

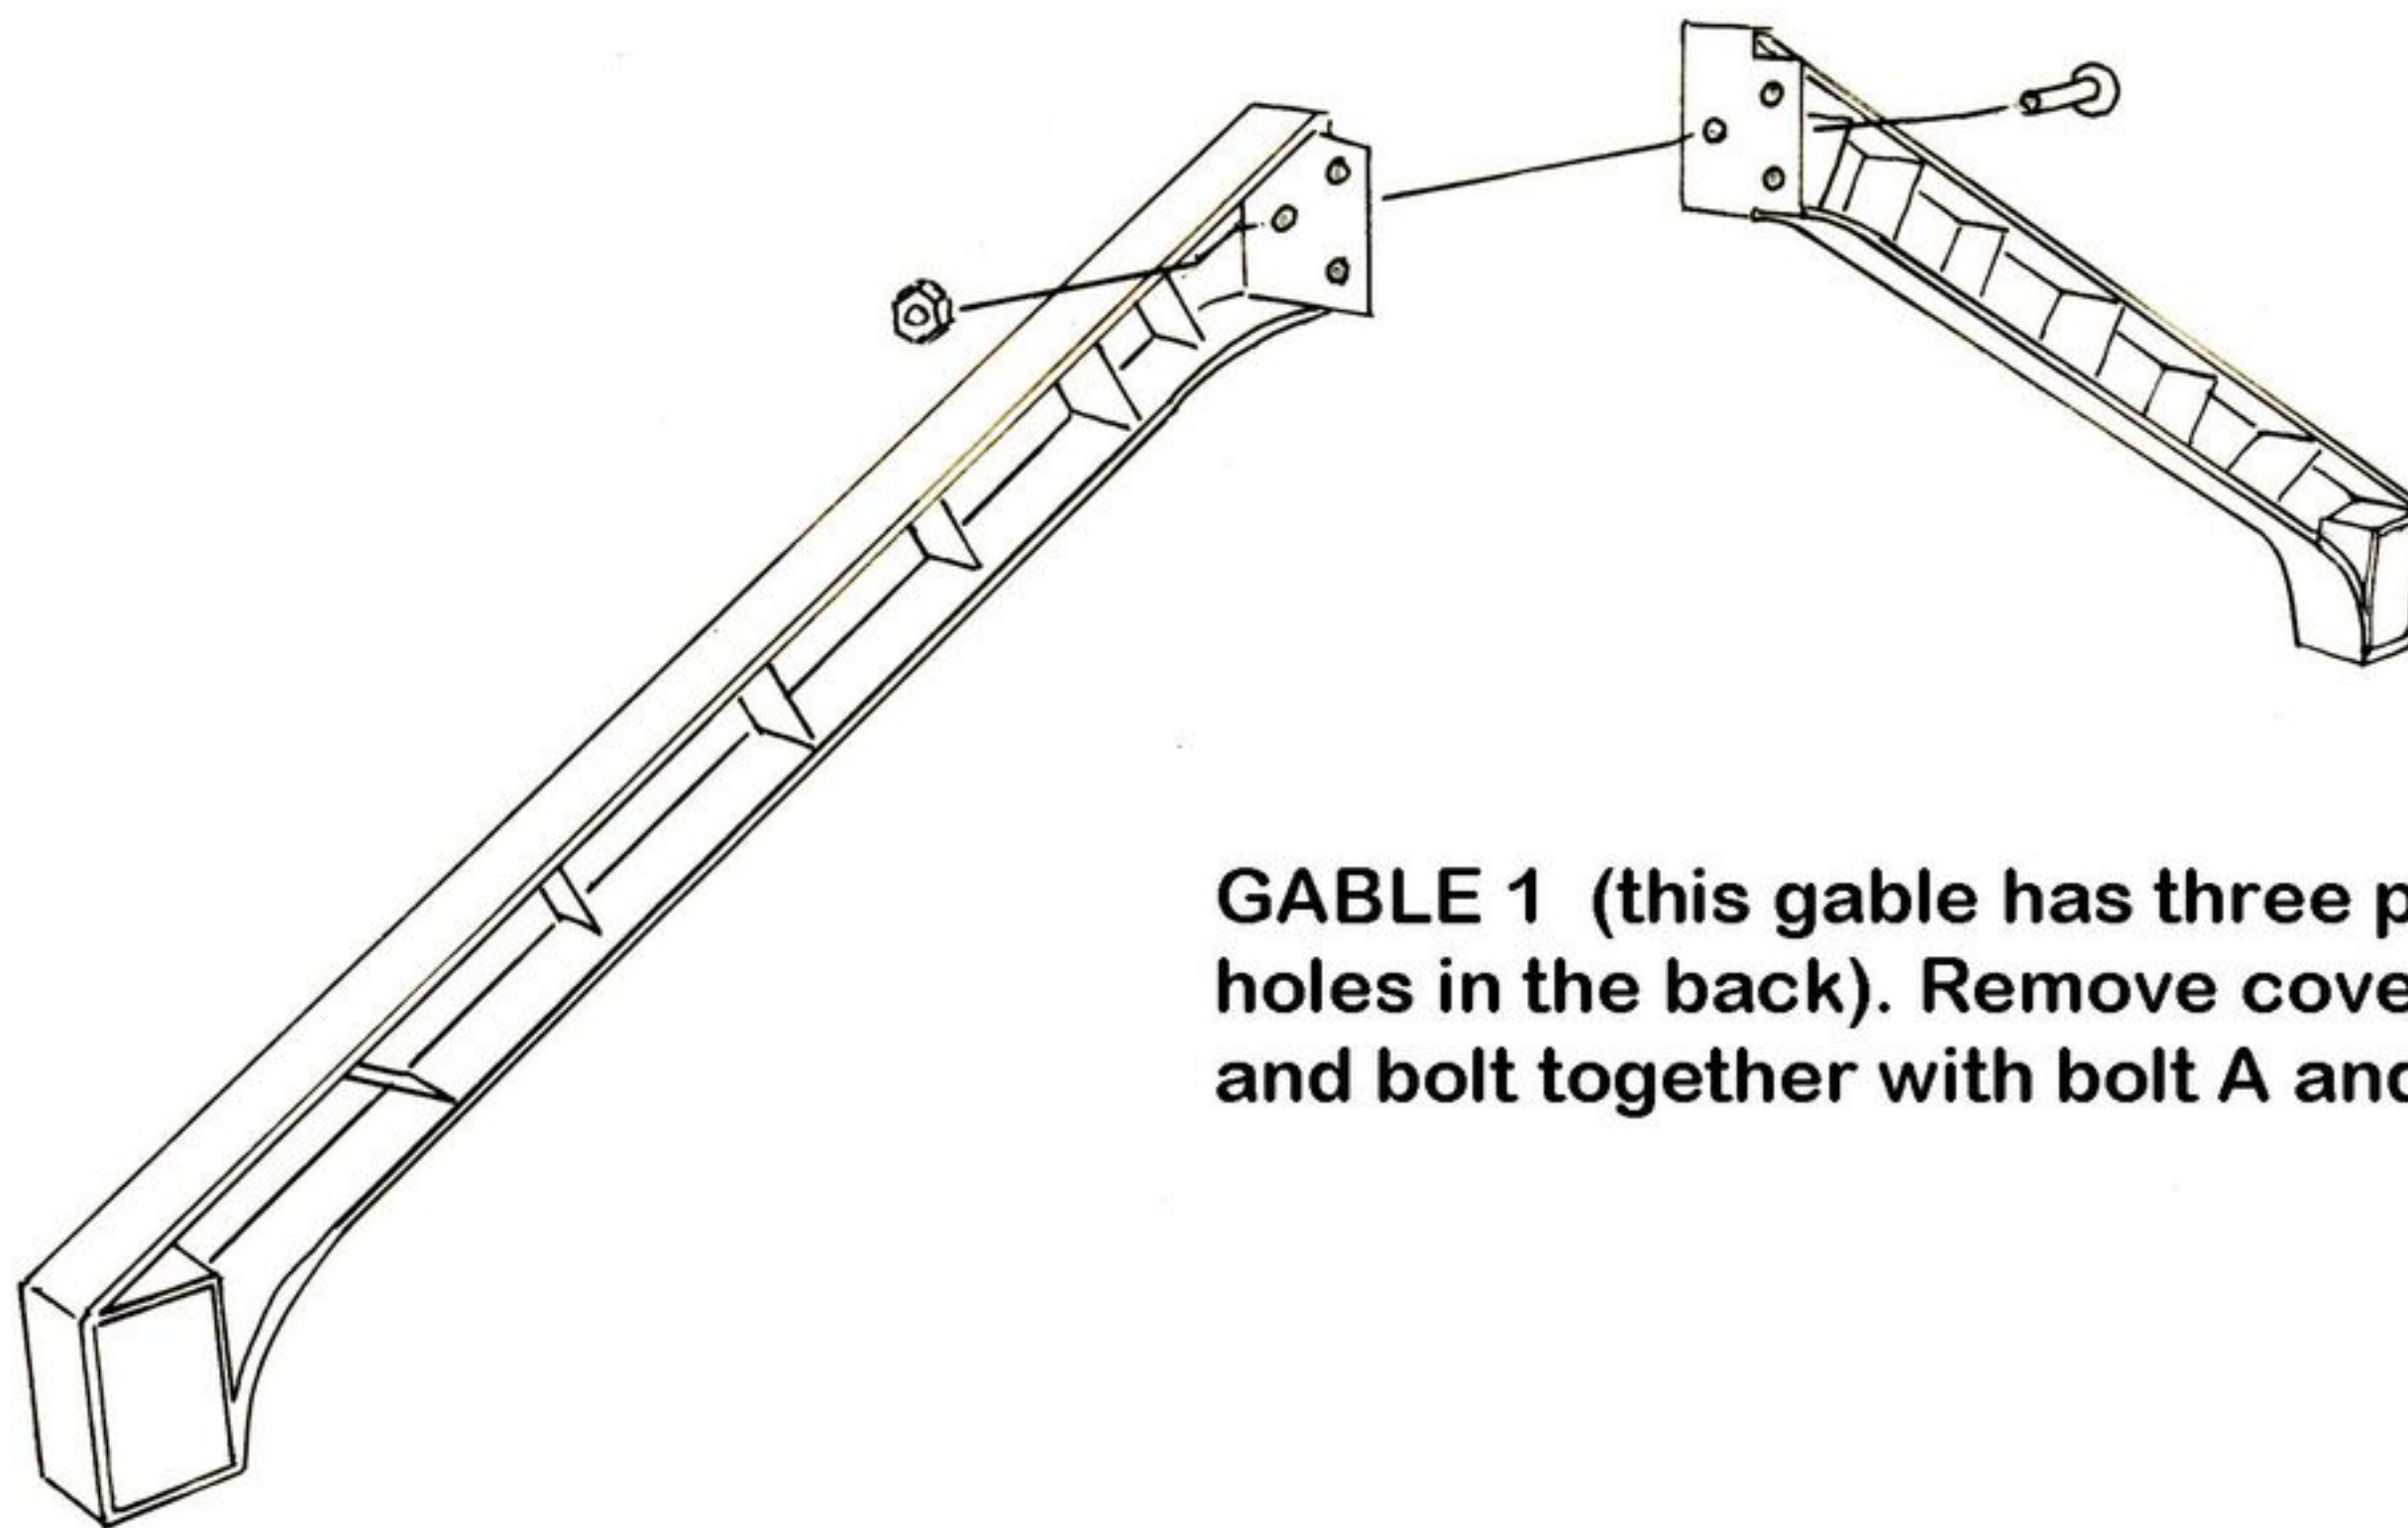

60mm Coach screw CS

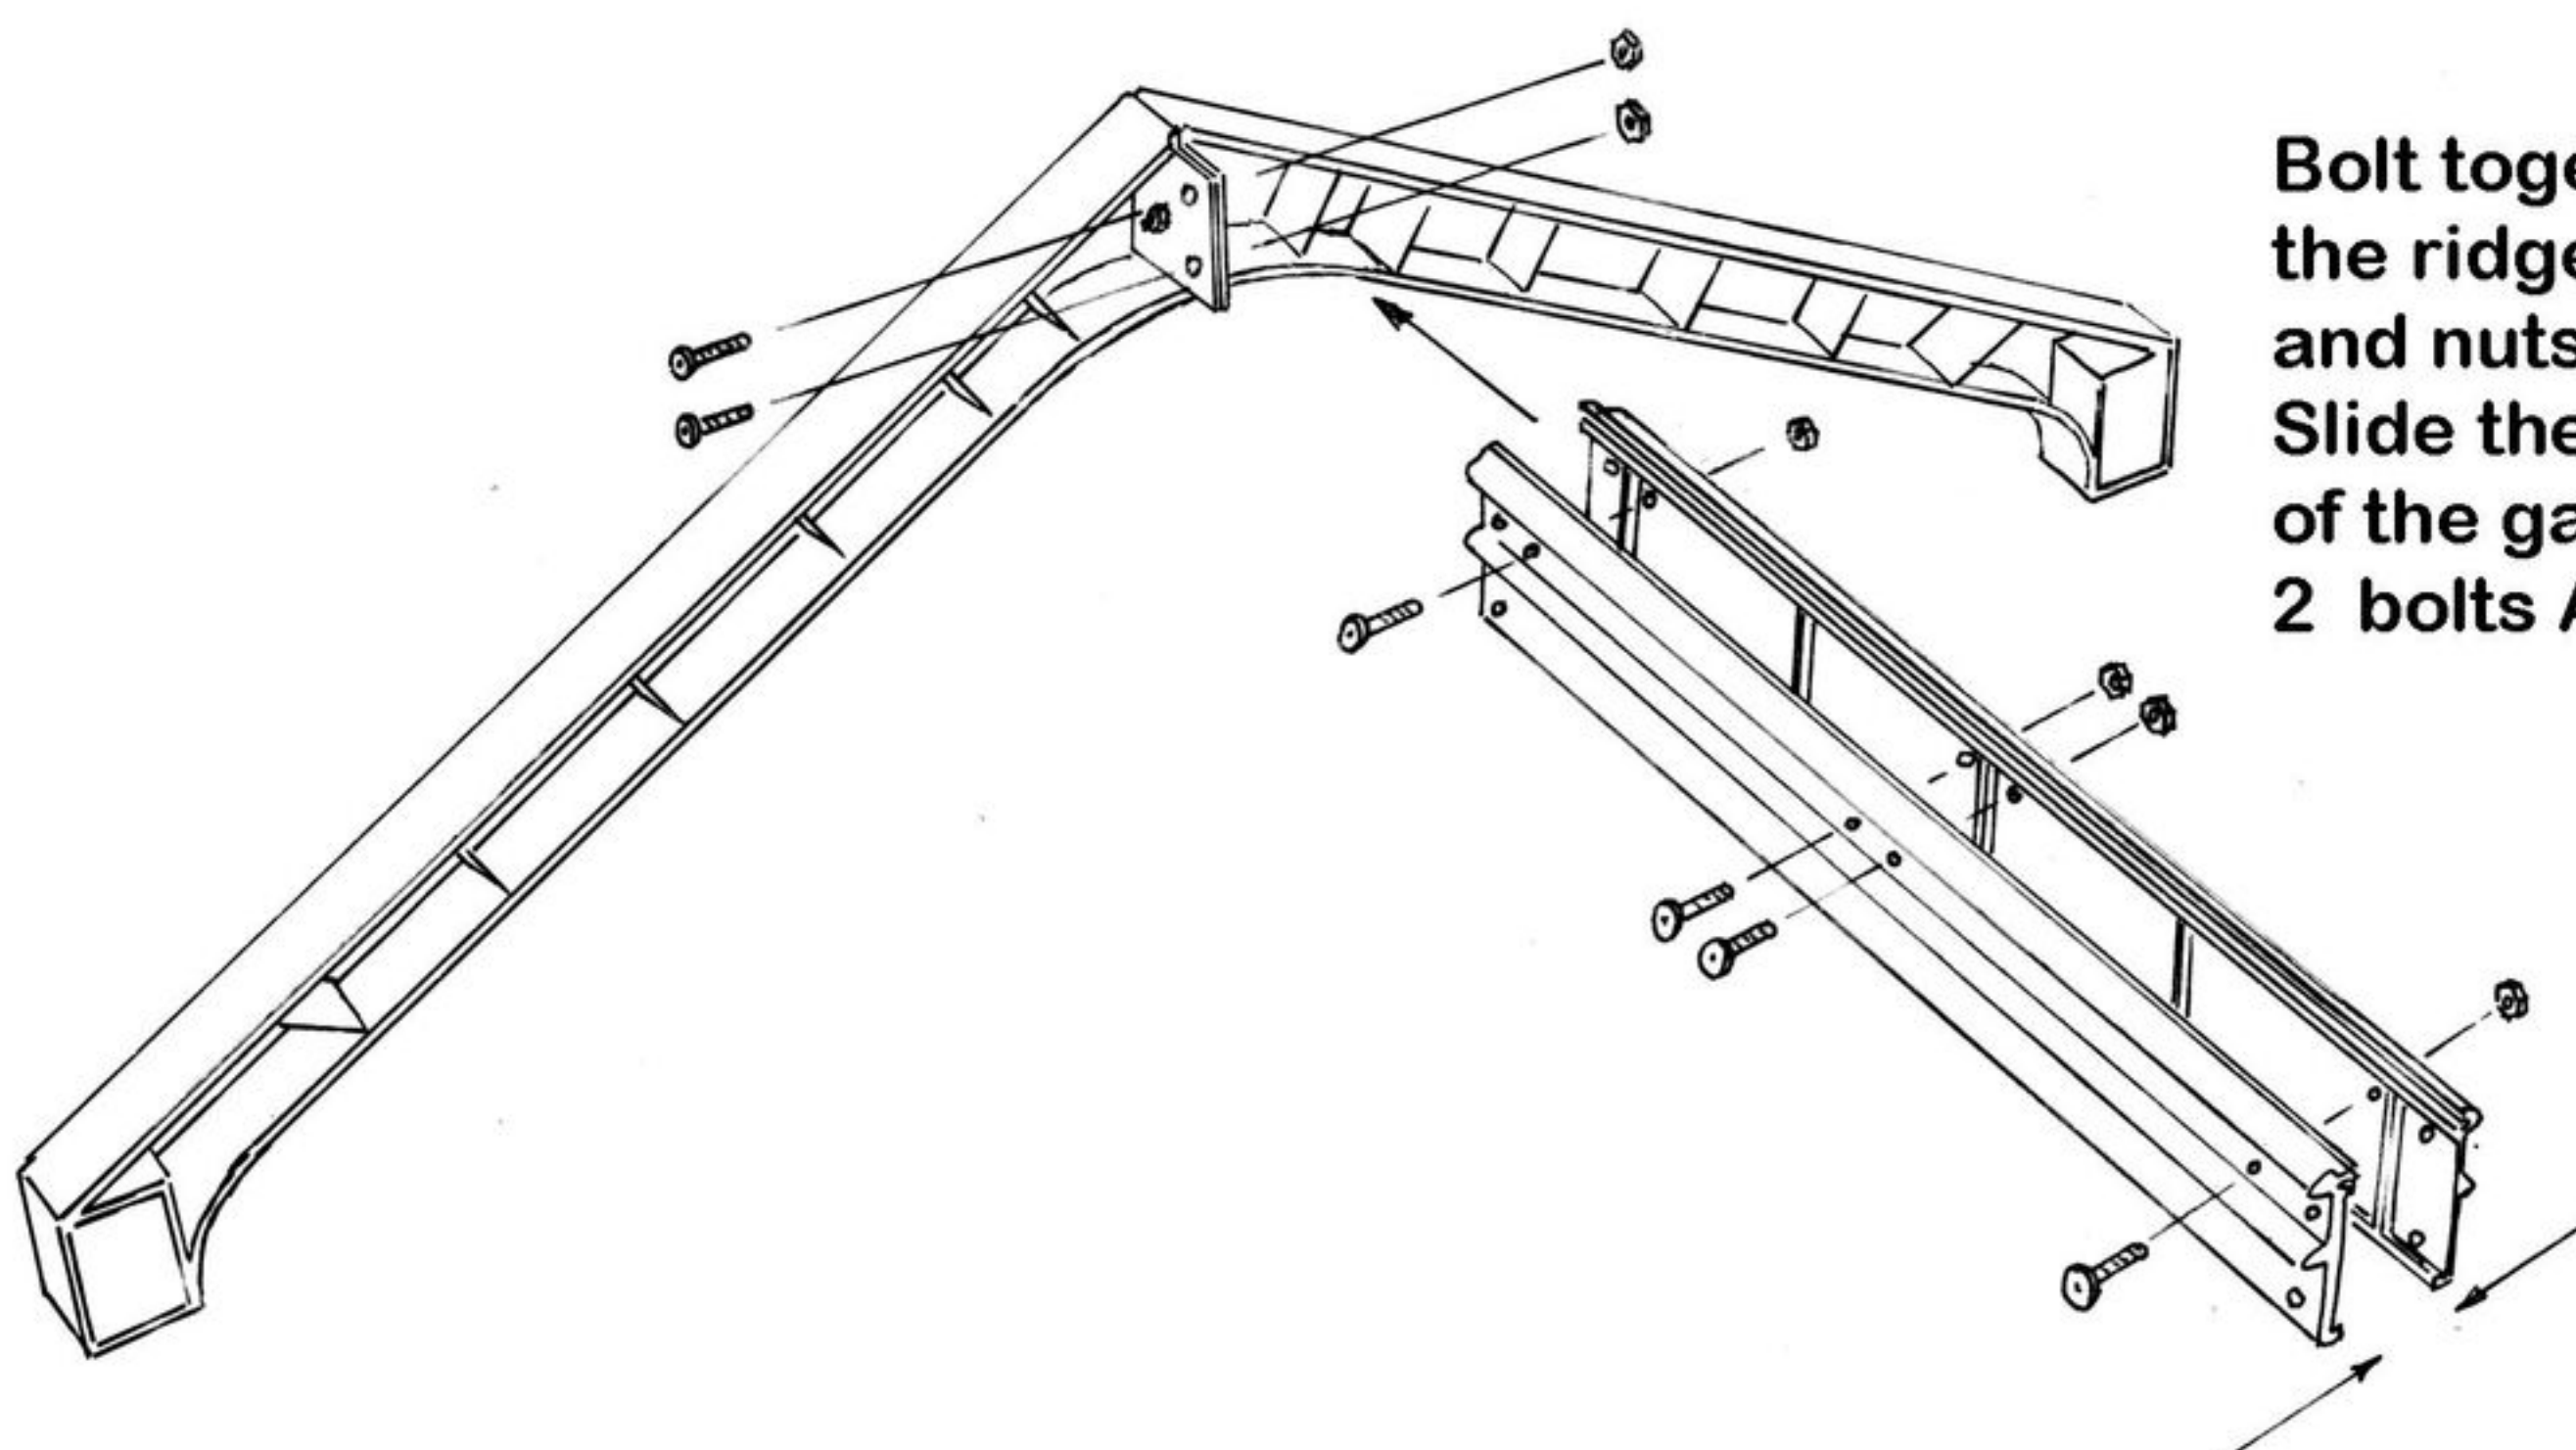

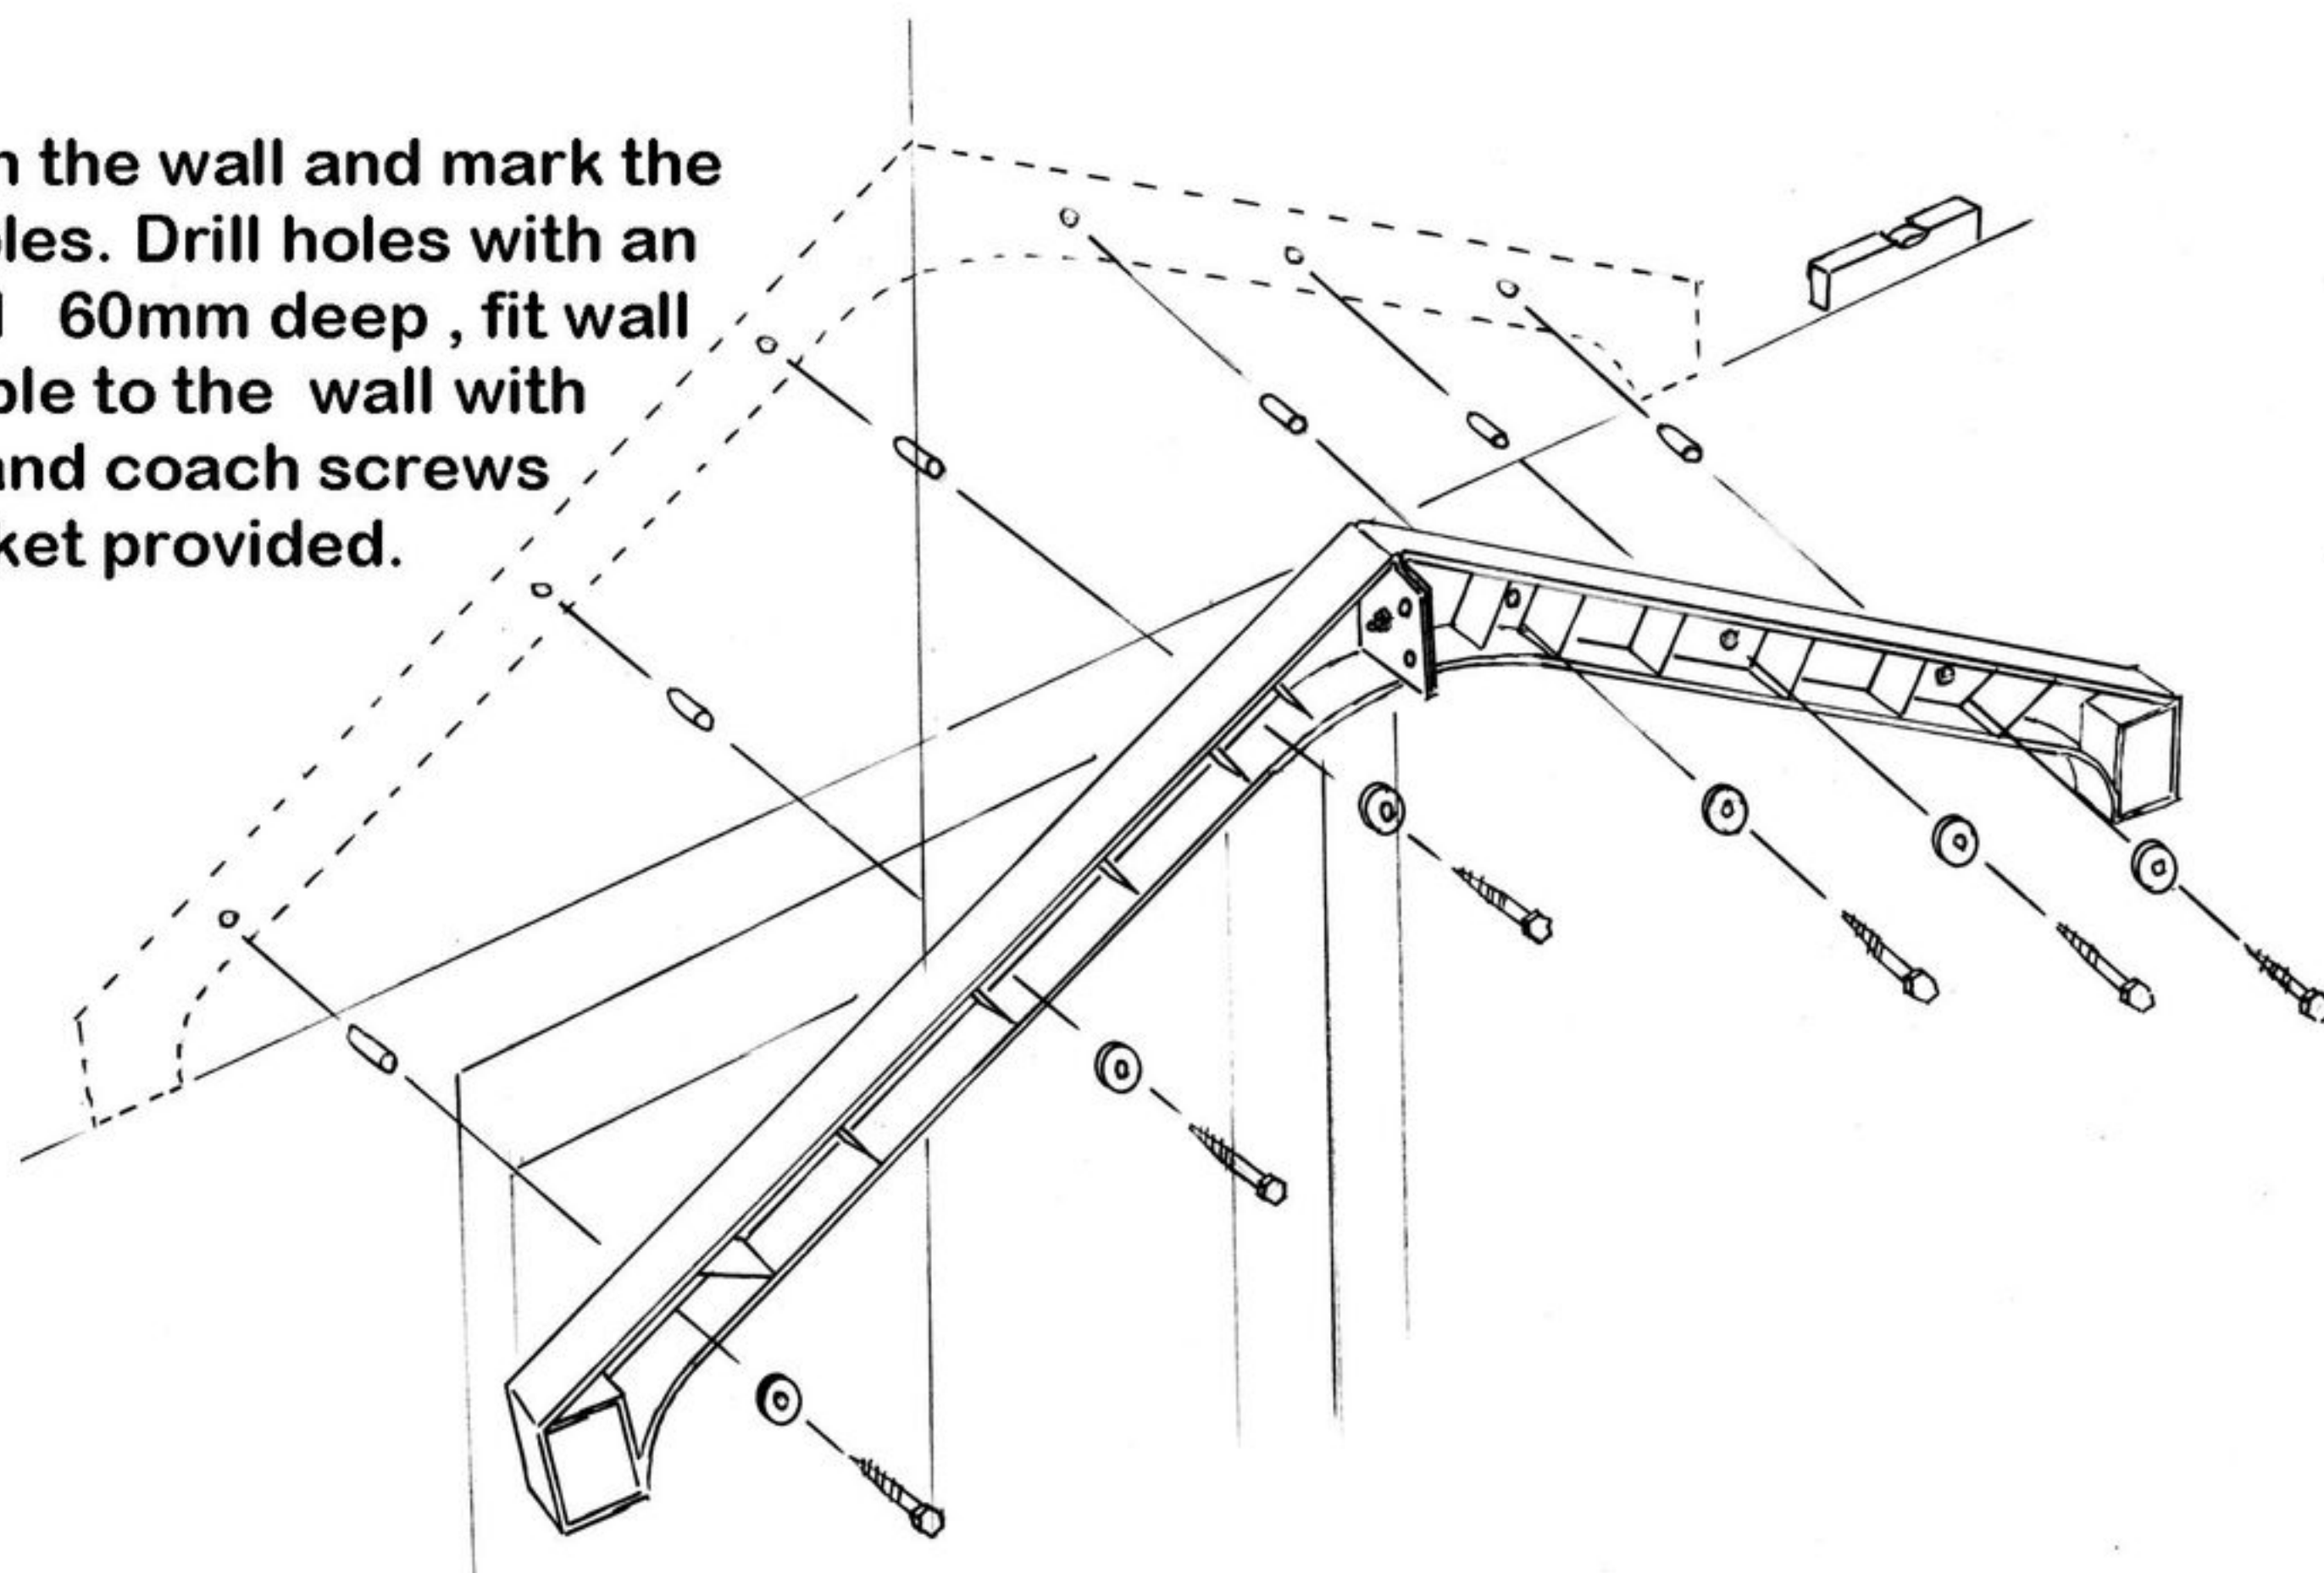

TOOLS

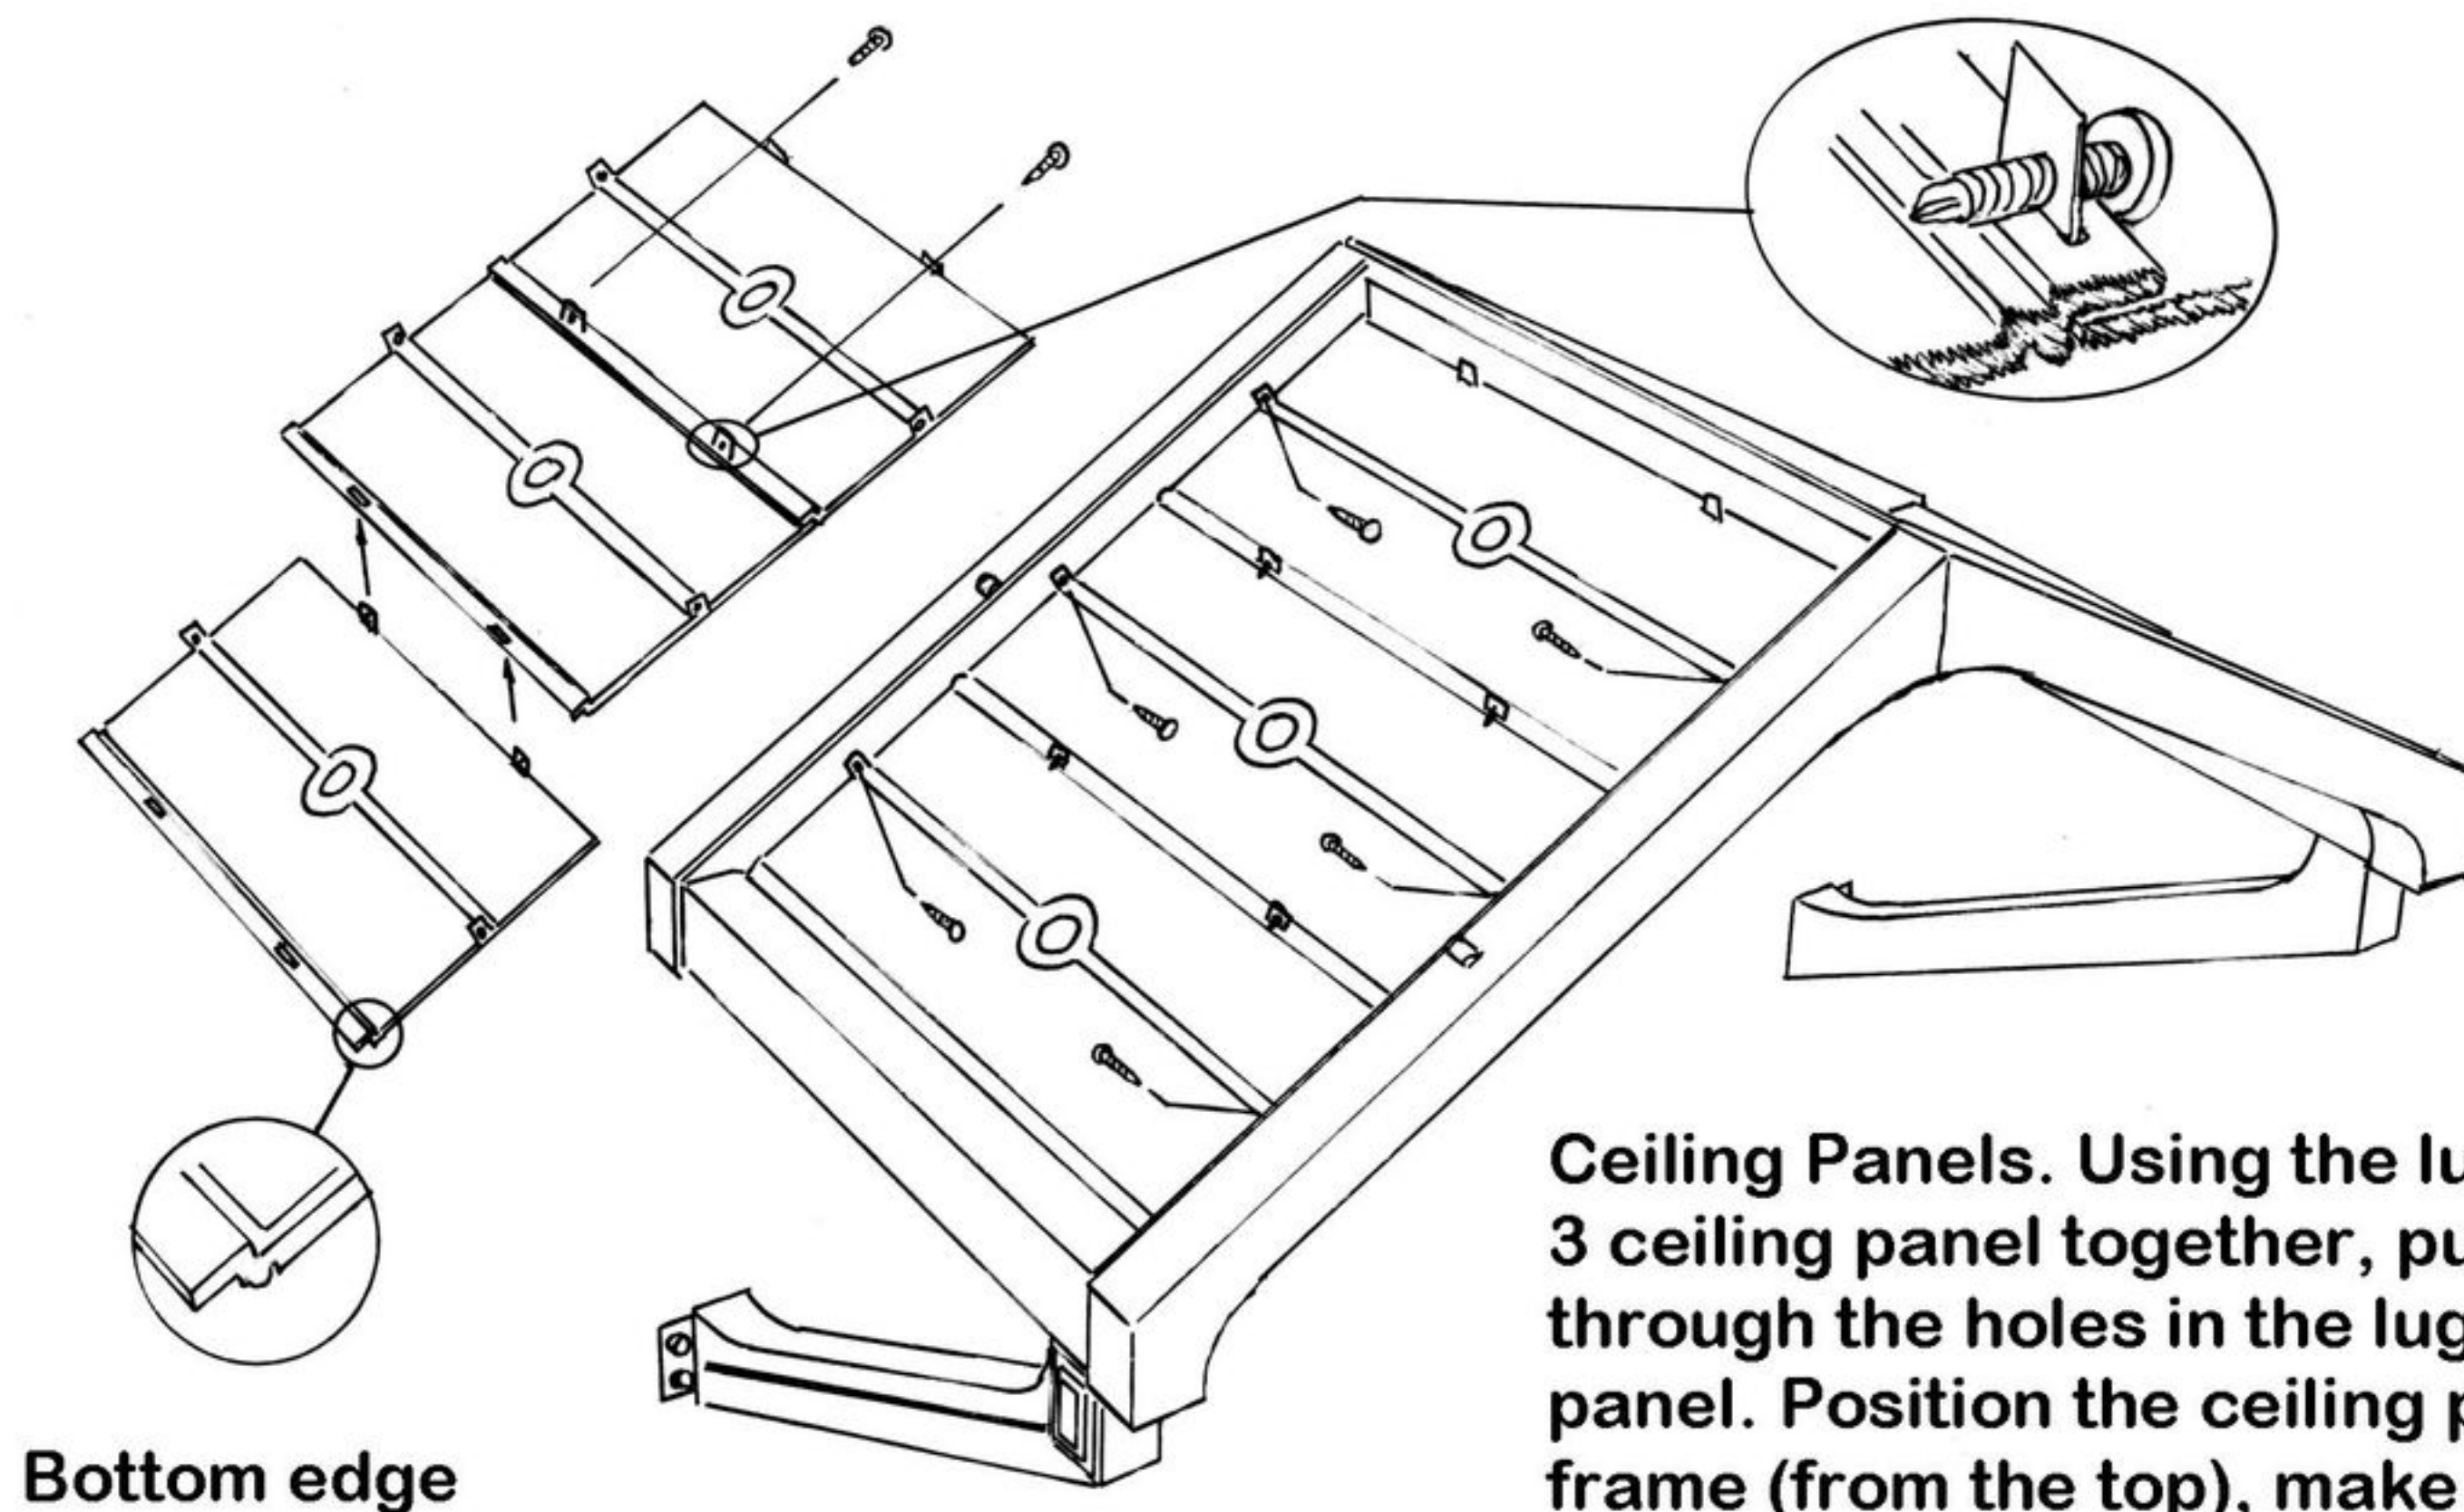

GABLE 1 (this gable has three pre drilled holes in the back). Remove cover plates and bolt together with bolt A and nut B

Position gable 1 on the wall and mark the positions of the holes. Drill holes with an 8mm masonry drill 60mm deep, fit wall plugs WP. Bolt gable to the wall with large washers W and coach screws CS using the socket provided.

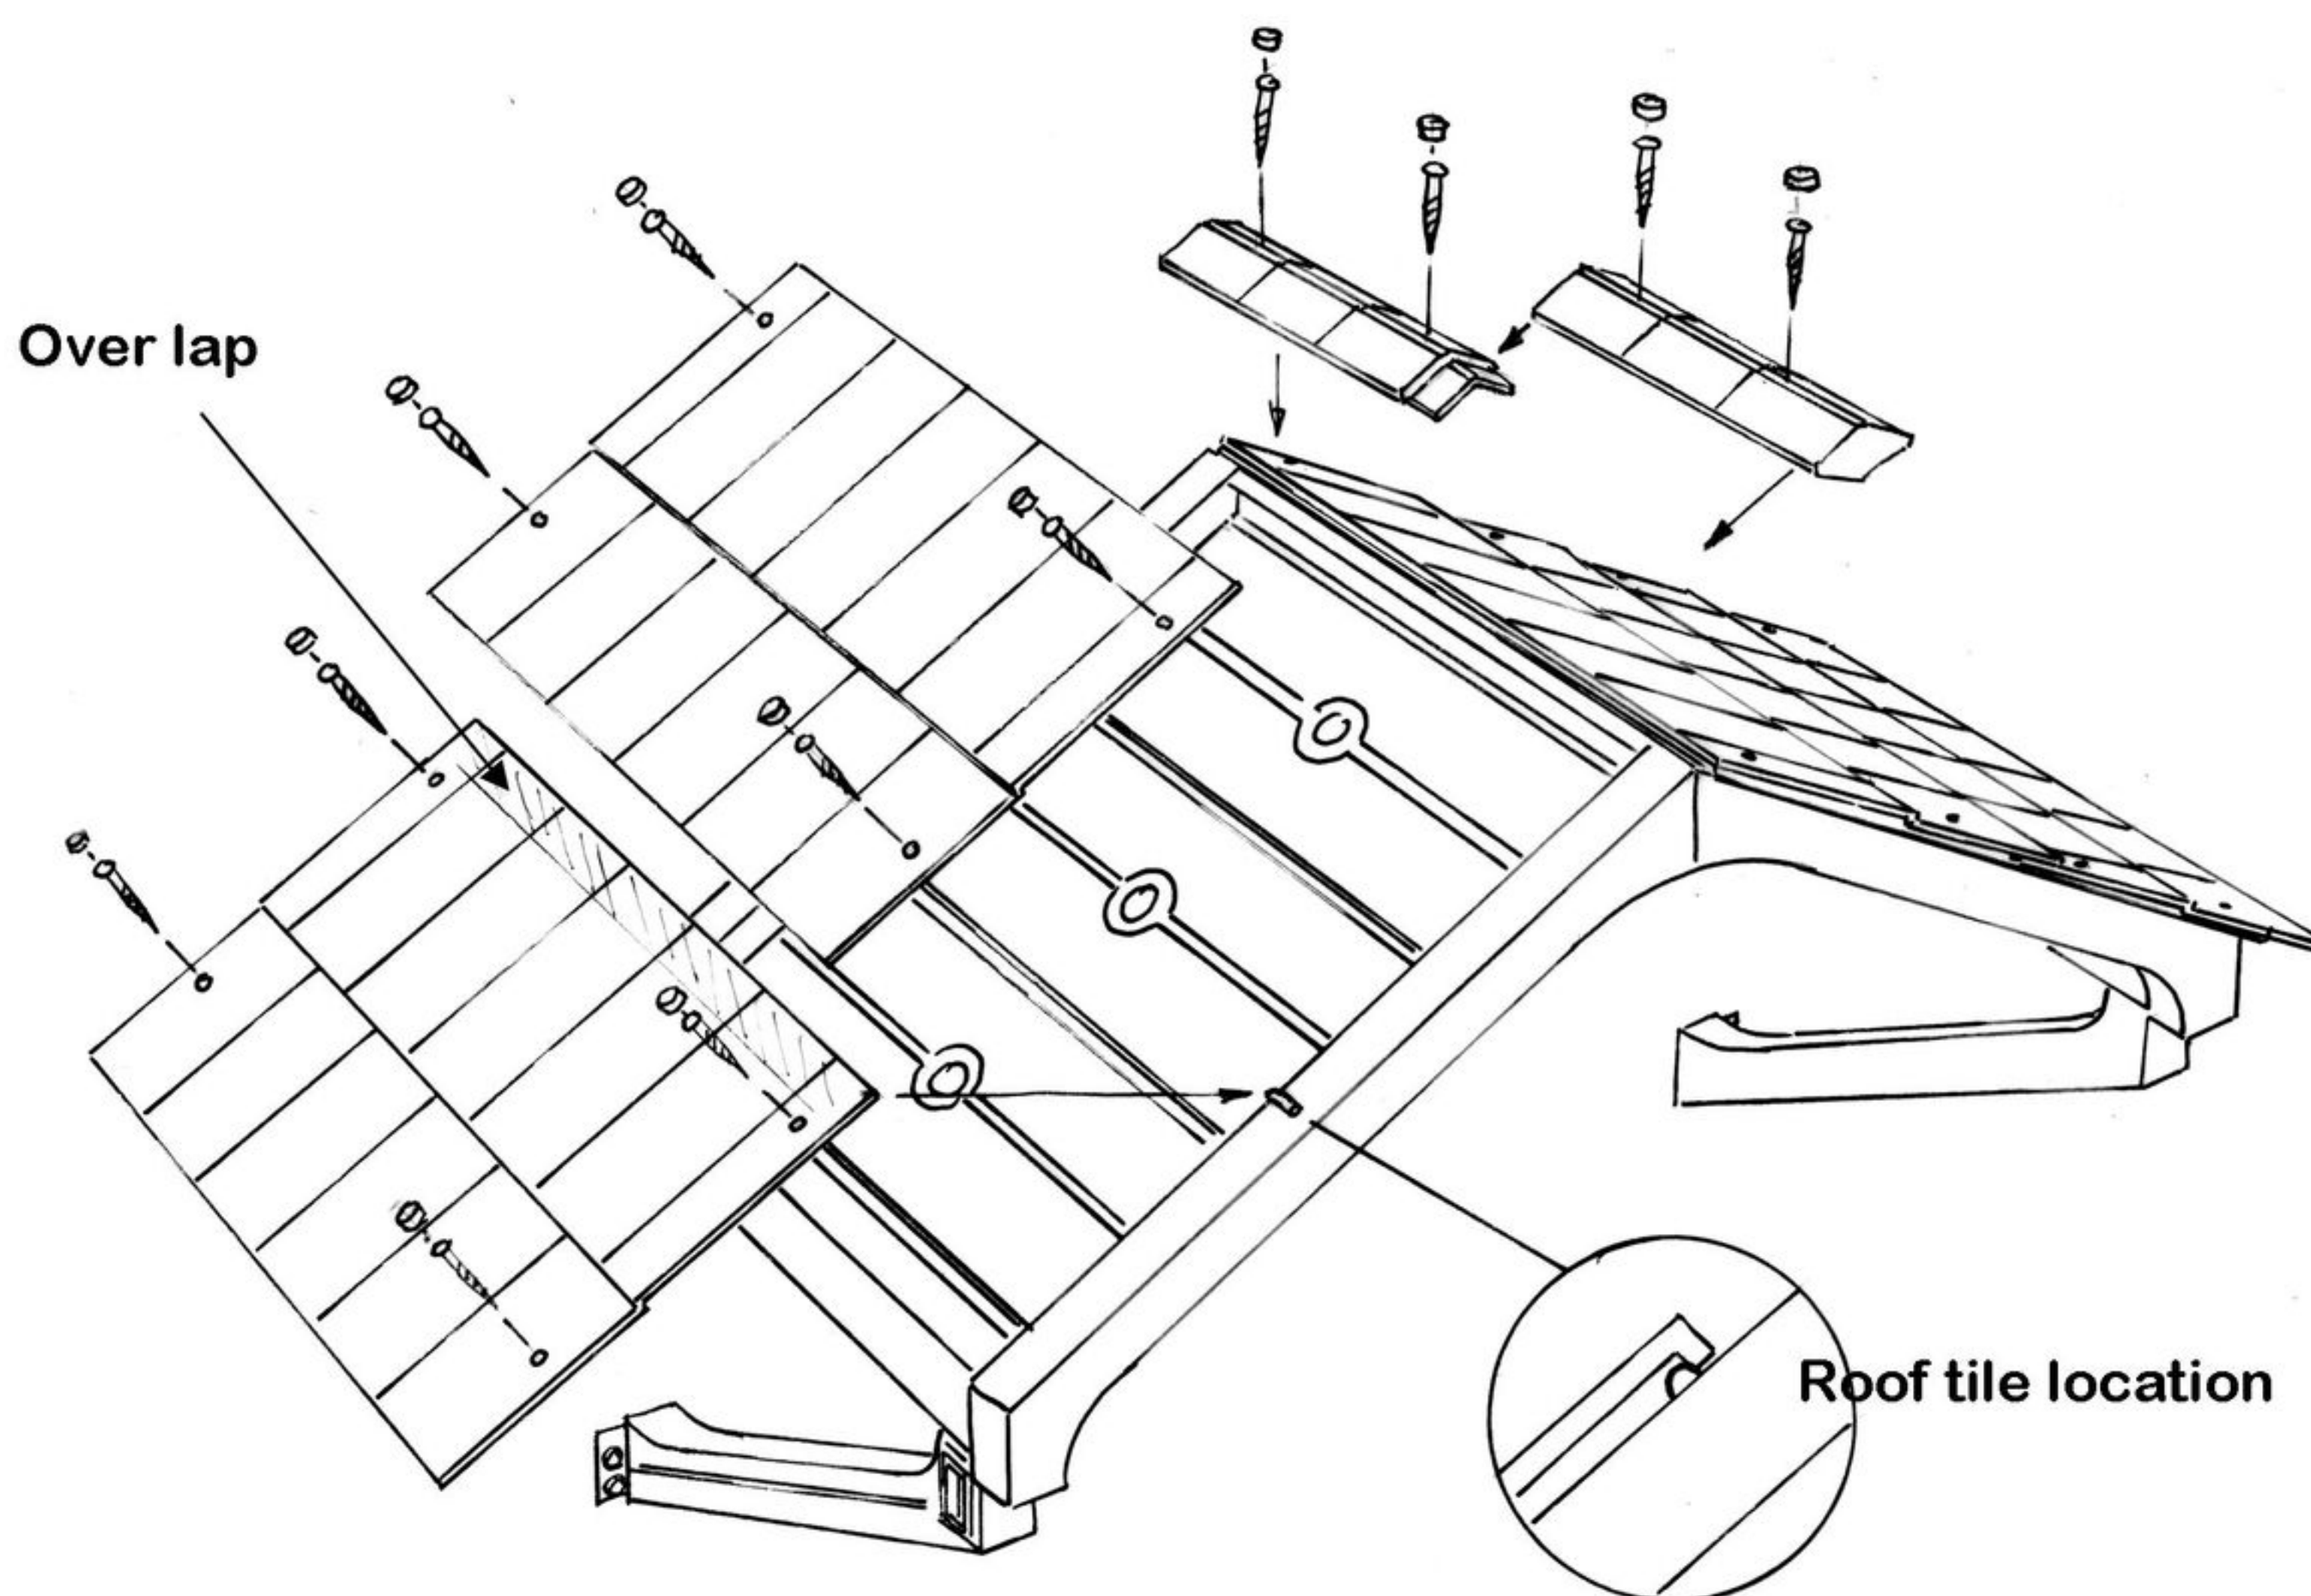

Bolt together the two parts of the ridge beam with 4 bolts A and nuts B. Slide the beam over the tongue of the gable and bolt on using 2 bolts A and nuts B

Bottom edge

Ceiling Panels. Using the lugs as location put 3 ceiling panel together, put short screws SS through the holes in the lugs to make one panel. Position the ceiling panel inside the frame (from the top), make sure you have the correct edge to the bottom and fix through the side lugs into the frame with short screws SS. Repeat for the other side

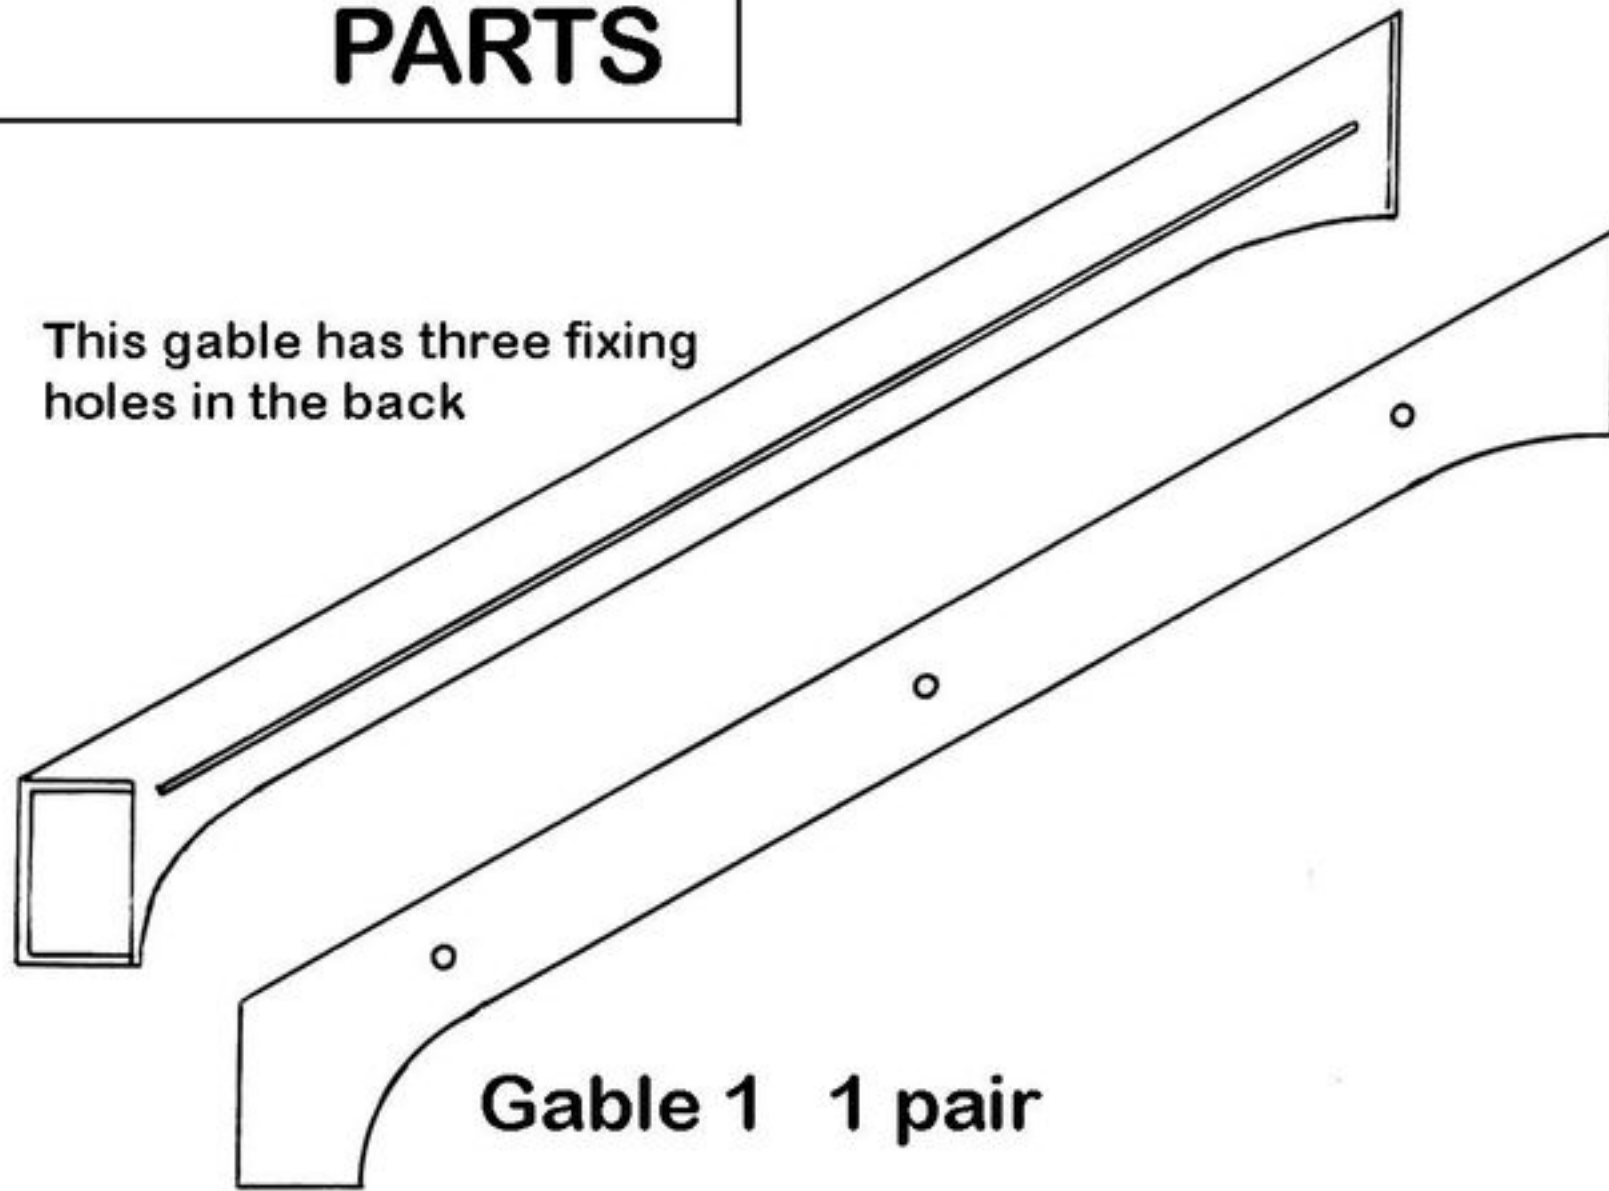

Roof tile location

Roof Tiles. Place the first roof tile on the gable with the edge against the wall, use the locator to find the position and fix down with 4 long screws LS. Place the second tile over the first tile and screw down with 4 long screws LS. Push small cover buttons into the screw holes texture side up to hide the screws. Repeat for the other side. Centralise the ridge tiles over the roof tiles and screw down using 4 long screws LS . Push small cover buttons into the screw holes textured side up to hide the screws.
